Google Calendar for Administrative Assistants

If you directly manage others' calendars, this is the Google Calendar guide for you. In this guide, you will learn about setting up delegated Google calendars, common Google Calendar tasks, tips and tricks to improve efficiency, and recommended Google Calendar Labs for administrative assistants. See the Calendar page and the Calendar FAQs in the Google Apps Learning Center for more tips and "how-to's."

What's in this guide...

Getting Started
- Access your manager's calendar
  - Set up delegated access
- How events appear to guests
- Receive notifications for your manager's calendar
  - Tips on using notifications
Work with your manager's calendar
- Accept or decline events on behalf of your manager
- Add a note to the invitation response
- See meeting status at a glance (invitation, accepted, declined)
- Create events on behalf of your manager
  - Schedule on your manager's calendar
  - Choose privacy setting
  - Specify the event time zone
Invitations and Events
- Invite guests to events
  - Check availability of guests
  - Invite Google groups to events
  - Select options for your guests in the “Guests can” section
- Schedule rooms or other resources
Schedule recurring events
Notify guests about events
   Email guests about event
   Send event invitations only to specific guests
   Create event reminders only your manager can see
Edit event details later
   Send updates to guests when you edit event details
   Drag and drop event to change time or day
   Duplicate events
   Transfer ownership of an event
   When guests edit event details on their own calendars

Manage Calendars
Print calendars
Customize your Calendar view
   Quickly view just one calendar
   Show an additional time zone
   Hide declined meetings
   Turn off automatically adding invitations to your calendar
   Optimize Calendar load time
Create new calendars
   Create a new calendar
   Create a calendar for a room or resource that you control

Calendar Tips & Tricks
Save time with Calendar keyboard shortcuts
Use Tasks in Calendar
Add interesting calendars from Google Calendar
Add calendars for favorite resources (conference rooms)
Include “Add to my calendar” link in emails

Calendar Labs
Enable Labs
Suggested Calendar Labs
Getting Started

Access your manager's calendar

If your manager delegates his or her Google Calendar to you, you can do the following on your manager's behalf:

- Respond to event invitations
- Create new events
- Modify existing events
- Manage sharing (if your permission is set to Make changes AND manage sharing)

However, you can't do the following in your manager's Calendar account:

- Change account settings, such as language, time zone, or automatically adding invitations to the calendar
- Use Task lists
- Access your manager's Gmail contact groups

Set up delegated access

Before you can manage your manager's calendar, you must first gain access to his or her calendar, as follows:
1. Have your manager log in to his or her Google Calendar.
2. In your manager's calendar, go to the My calendars section, and click the down arrow that appears to the right of your manager's name.
3. Select Share this calendar from the drop-down.

![Calendar Sharing Screen]

4. In the Person field, type your primary email address.
5. In the drop-down menu, select the appropriate permission, and then click Save.

- **Make changes to events** lets you edit your manager's calendar
- **Make changes AND manage sharing** lets you edit the calendar's sharing options, too. (For example, you can give another admin access to your manager's calendar while you are away on vacation.)
You now have access to your manager's calendar and can see and modify all meetings on the calendar, including private and confidential events. (You may wish to remind your manager of this fact.)

If you have **Make changes AND manage sharing** access to your manager's calendar, you'll now see your manager's calendar in your own account in the **My calendars** list on the left.

If you have **Make changes to events** access to your manager's calendar, you'll see your manager's calendar in your own account in the **Other calendars** section.

💡 To easily distinguish your calendar from your manager's calendar, choose very distinct colors for each calendar, such as red and blue. Change the color of a calendar by going to the **My calendar** section, hovering over the calendar, clicking the down arrow that appears, and selecting a new color from the grid.

**How events appear to guests**
If you create an event on behalf of your manager and send out an invitation email to event guests, your manager appears as the sender of the email. When guests view the actual email, your manager appears in the bottom Who field as the organizer, and you appear as the creator.

For example:

When guests click on the event in their calendar, you appear as the creator, and your manager's calendar appears as the calendar. However, your name is not included in the guest list.

For example:
Receive notifications for your manager's calendar

Notifications for your manager's calendar are disabled by default—if you want to receive notifications for your manager's calendar events, you must manually enable them.

**Note:** When you enable notifications for a calendar shared with you, you are *not* enabling notifications for the calendar owner. (That is, when you enable notifications for your delegated view of your manager's calendar, you're the only one who receives notifications; your manager doesn't, unless he or she has personally set up notifications.)

To receive email and pop-up notifications for your manager's calendar, follow these steps:

1. Log in to your Google Calendar.
2. Your manager's calendar appears in the **My calendars** list, and his or her meetings appear on your calendar.

   **Note:** If you cannot see your manager's events in your calendar, click his or her calendar in the list to highlight it.

3. Hover over your manager's calendar, click the down arrow that appears, and select **Reminders and notifications**.
4. In the **Event reminders** section, click **Add a reminder**.

5. Select either **Email** or **Pop-up** from the drop-down. (If you’d like both options, click **Add a reminder** again.)

6. Once you’ve customized your event reminders, select the invitations for which you want to be notified. To start, you can select all notifications, and later remove the notifications you don’t need.
Note: If you select the **Daily agenda** option, the emailed agenda won't reflect any event changes made after 5am in your local time zone.

**Tips on using notifications**

If you and your manager have each set up email notifications for new invitations, your manager will receive an "Invitation" email in his or her Inbox, and you'll receive a "New Event" email in your own Inbox. For example:

**Your manager's Inbox**

![Email notification example for your manager](image)

**Your Inbox**

![Email notification example for you](image)
These different email subjects allow you to easily distinguish your own invitation notifications from your manager’s.

Work with your manager’s calendar

Accept or decline events on behalf of your manager

You have three options for doing this:

- **Accept or decline from the delegated Calendar view**
  You can respond from the invitation that appears on your manager’s calendar (which is shared with you). Just click anywhere on the event, and then click Yes, Maybe, No, or Remove.

- **Accept or decline from delegated Gmail**
If your manager has given you access to his or her Gmail account, you can also respond from the “Invitation” email in your delegated view of your manager's Inbox. Just click Yes, Maybe, or No in the Going? section.

Note: Your manager must have personally set up notifications for his or her own calendar in order to receive this email.

- **Accept or decline from email notifications**
  If you've set up email notifications for your manager's calendar, you can respond directly from the "New Event" email you receive in your Inbox. Click Yes, Maybe, or No in the Going? section.
Add a note to the invitation response

If you want to add a note to your response to an event, go to the event details page. You can do this by:

- Clicking the actual event name (such as Team Meeting)
- Double-clicking anywhere on the event
- Clicking anywhere on the event, and then clicking More details in the pop-up

On the event details page, you can add your note to the Going? section near the top of the screen, and click Save. Because not all people choose to get notifications about event responses, you may also want to email the meeting owner with any important messages.
See meeting status at a glance (invitation, accepted, declined)

You can quickly view your meeting status without going into the event details page.

**Event invitations**
Event invitations to which you haven't yet responded have a reply arrow before the meeting time.

![Event invitation](image)

**Events with a “Maybe” response**
Event invitations to which you’ve responded “Maybe” have a question mark before the meeting time.

![Event invitation](image)

**Accepted events**
Accepted events don’t have a question mark.

![Event](image)

**Declined event**
Declined events are dimmed, and the event title has a strike through it.

![Event](image)

**Other Calendar icons explained**
When you hover your mouse over Calendar events, you might notice other icons at the top of the event. Below is a list of the icons you will see and a description of what each icon represents.

- 🔔 One or more reminders set for the event
- 👤 One or more individuals invited to the event
- 🚞 Private event
Recurring or repeating event
A single event moved from a recurring or repeating event

Create events on behalf of your manager

Creating an event on behalf of your manager is as easy as creating an event on your own calendar, but there are a few things to keep in mind.

Schedule on your manager's calendar

If you have both your manager’s and your own calendar open at the same time, the default calendar for creating new events is your own calendar. If you’re in a rush, it’s easy to forget to choose your manager’s calendar from the Calendar drop-down on the event creation pop-up.

Each time you create an event on behalf of your manager, remember to check that you’re creating it on your manager’s calendar and not your own.

![Image of event creation pop-up with calendars drop-down]

If you find you have trouble with viewing your calendar and your manager's calendar at the same time, try using two separate browser tabs (or windows, if your browser doesn't have tabs). Use one tab (or window) for your own calendar and a different one for your manager's.

Choose privacy setting
Managers often have sensitive or confidential meetings, so to keep meeting details private, you can select the **Private** radio button in the **Privacy** section of the event details page. Rest assured that only meeting participants and people with 'Make changes to events' privileges and higher, can see event details when the event is set to **Private**.

**Note:** If most of your manager's meetings are confidential, you can change the default sharing options for your manager's calendar so that other people in your organization will only be able to see free/busy details or not be able to see your manager's calendar at all. To do this, your permission must be set to **Make changes AND manage sharing**.

Here's how:

1. In your Google Calendar, click the drop-down arrow next to your manager's calendar, and select **Share this calendar**.
2. If you want others in your organization to only be able to see free/busy information, make sure the **Share this calendar with others** box is checked. Then, choose **See only free/busy (hide details)** from the drop-down.
3. If you don't want anyone in your organization to view your manager's calendar, uncheck the **Share this calendar with others** box.
4. Click **Save**.

**Specify the event time zone**
If your manager travels a lot, it can be a headache to schedule meetings in different time zones. With Google Calendar, you can easily specify the time zone for a given event.

Events will appear on your calendar according to your current time zone, and when you change to your destination time zone, they'll be in the right place.

1. Just click the Time zone link to the right of the date and time fields on the event details page.

2. Next, specify the event time zone in the pop-up. If you want, you can even set up events that start in one time zone and end in another, ideal for those of you with managers who fly often.

3. Click Done.

Invitations and Events

Invite guests to events

To add one or more guests to an event, do the following:
1. Go to the event details page of your event.
2. In the **Add: Guests** section on the right side of the page, type your first guest's email address.

![Add: Guests](image)

3. Continue adding your guests' email addresses one by one.
4. If desired, fill in the rest of the fields on the page.
5. Click **Save**.

### Check availability of guests

When you want to invite guests to events, you have two options to see when each guest is available.

**Option 1. Check availability in an event**

In the event details page, click the **Find a time** tab.

![Find a time](image)

Then, add guests to view their availability.
Option 2. Check availability through calendars
You can also overlay other calendars on your calendar. Each calendar appears in a different color, so you can tell exactly who is busy and when. To overlay calendars:

In the Other calendars list on the left of your calendar, type the names or email addresses of the employees whose calendars you would like to add. Once you add a calendar, you can click on it to toggle it on or off.
Note: A long list of calendars in the Other calendars list can make your calendar slow to load. (See Optimize Calendar load time below.)

Invite Google groups to events

If you or your Google Apps administrator has created Google groups (mailing lists) for your organization, you can invite a group to a meeting. Simply enter the single address for the group as a guest, instead of entering the individual addresses of all the members of the group.

After you’ve entered the group’s address, the Guests field will populate with the individual group members, as seen below. If you want to exclude any group members, you can click the “X” to the right of their names.
Note: Group updates are reflected in invitations with fewer than 200 guests. If you invite a group to a large event and the group is updated after the Google Calendar invitation has been created, the invitation will not capture those changes. Large events are those with more than 200 invitees, including rooms, group members, and people who were previously invited but then removed.

Select options for your guests in the “Guests can” section

When you invite guests to events, the invite others and see guest list boxes are checked by default.

If you’d like your guests to be able to edit event details—such as adding rooms, adjusting the time, or adding attachments—you can also check the modify event box.

Schedule rooms or other resources

If your Google Apps administrator has created Calendar resources (such as rooms, projectors, or other shared resources) for your domain, you can add resources to your events much the same way you invite guests to your events.
1. Go to the event details page of your meeting.
2. In the Add: section, click Rooms, etc.
3. Do either of the following:
   - Start typing any part of the room or other resource's name in the "Filter room" box. A list of matching resources appears in the list.
     
     For example, in the following screenshot, when you start typing ch, two rooms populate: Kanchenjunga and Challenger.
   
   ![Screenshot of the Google Apps interface showing the 'Filter room' feature]

   - Browse the list to find the room or other resource you want to book. For example:
     
     ![Screenshot of the Google Apps interface showing the list of available rooms]

4. Check if the resource is available during the time of your meeting
5. To book an available resource, click Add (to the left of the resource name). If there aren't any available resources, try changing the time or day of your event. To easily find a time that works for all guests and resources, click the Find a time tab.

6. After you've entered all event details, remember to click the Save button.

**Schedule recurring events**

Google Calendar makes it easy to schedule recurring (repeating) events. Here's how:

1. Go to the event details page.
2. Check the box to the left of Repeat.

3. In the Repeat pop-up, select an option from the Repeats drop-down.
4. Depending on your selection from the **Repeats** drop-down list, further define how the meeting recurs, including specifying start and end dates (if applicable).

5. Finish creating your meeting as usual.

**Notify guests about events**

As you've probably already learned, when you save a newly created event, a pop-up automatically asks you if you'd like to send invitations to guests. However, there might also be times when you want to contact only a subset of guests, or you might want to contact all guests without making changes to the event details. This section tells you how to email *which* guests you want to email *when* you want to email them.

**Email guests about event**

Occasionally, you might want to email all or some guests after you've already created and saved an event. For example, you might want to remind people who haven't responded to an event to respond. Or you might also want to email instructions to all guests who replied *Yes*.

1. Go to the event details page of the event.
2. In the **Guests** section, click **Email guests**.
3. In the pop-up, you can choose to email all guests or a subset of guests, such as those who have replied *Yes*. 
Note: You can uncheck both the Yes and No boxes, and you can also manually enter additional emails into the address field.

4. After you’ve selected which guests you want to email, fill out the Message field.
5. Click Send.

Send event invitations only to specific guests

If you want to avoid clogging guests’ Inboxes with invitations to events they already know about, you can send event invitations only to those guests who aren’t already aware of the event. Here’s how:

1. Begin scheduling the event.
2. Add the people to whom you don’t want to send notifications.
3. Click Save, and select Don’t send in the Send invitations? pop-up.
4. Open the meeting again, and add the people to whom you want to send notifications.
5. Don’t make any other modifications to the meeting before you save it. If you change the time, room, description, etc., Google Calendar will send the updated notification to all guests on the meeting list. The only time Google Calendar sends an update to only new guests is if your only change to a meeting is to add guests.
6. Click Save, and select Send in the Send invitations? pop-up to send invitations to new guest.
7. Only the newly added guests will receive the email notification.

Note: Individual users can set a preference to not receive notifications.
Create event reminders only your manager can see

In previous calendar applications, you might have been used to adding event notes that only your manager could see. However, in Google Calendar, if you are the meeting organizer, any note you add in the event's Description field appears in the event on every guest’s calendar.

If you want to create meeting reminders that appear only on your manager’s calendar, you have a few different options:

- If someone else is the meeting organizer, you can add a note in the event’s Description field on your manager’s calendar. This note will only appear on your manager’s calendar, but depending on the privacy settings for your manager’s calendar, people who view your manager’s calendar may be able to see the note. (To make the note private, select the Private radio button in the Privacy section of the event details page.)

  **Important:** If the meeting organizer updates the Description field in which you put the note, your note will be overwritten.

- On your manager’s calendar, you can create a separate event at the same time as the original event. In the new event’s Description field, you can add all of the essential information your manager needs to know. You can even add attachments. (If any of this information is sensitive, remember to select the Private radio button in the Privacy section.)

Alternatively, you can always email or chat event reminders to your manager with Gmail.

Edit event details later

There are many reasons why you may need to change event details after you’ve already created an event—you may need to change the time or day, or you may even need to duplicate the event or transfer ownership to another person.

Send updates to guests when you edit event details

If your event includes guests, and if you change the event by editing the event details page, the Send update? pop-up will appear after you click Save. Click Send or Don’t send to update existing guests.
Drag and drop event to change time or day

If you need to change just the event time and/or day (and leave all other event details the same), you can simply left-click on the event and drag it to a new time slot. If your event includes guests, follow the prompt to update them about the changes.

Duplicate events

If you need to create an event with similar details to an existing event, you can save time by duplicating the existing event and changing only the relevant details.

To duplicate an event, go to the event details page for the event that you want to duplicate, and then, in the More Actions drop-down list, select Duplicate Event. The event details page for the new event will appear.

Transfer ownership of an event
If someone else takes over responsibility for an event you created (such as a recurring meeting), you can transfer the ownership of the event. This means that the new person “owns” the event and can make changes to it.

To transfer ownership:

1. Open the event you want to transfer from the calendar of the original owner.
2. Select Change Owner from the More Actions drop-down menu (next to the Delete button).
3. Type the email address of the new owner in the New Owner field.
4. If desired, customize the email message.
5. Click Change Owner.

The new owner will receive a notification email, and he or she should click the included link to accept ownership of the event.

Note: Even though the new owner now controls the event, the original owner’s name will still appear in the Created by field.

When guests edit event details on their own calendars

Unless you’ve allowed guests to modify events (see Select options for your guests in the “Guests can” section above), only the person who created the event can make changes that appear on all guests’ calendars. If guests change details about an event, their changes show up only on their calendars.

Additionally, if the event creator modifies an event, the creator’s updates override any changes that guests have made to their own calendars.

For example, if you create an event and invite John, and then John adds a new room, the room change will show up only on John’s calendar. If, however, you later change the time of the event, the event will be moved to a different time on John’s calendar, and the room change that John made will no longer appear on his calendar.

Manage Calendars

Print calendars
1. Make sure only the calendars you want to print are highlighted in your list under **My Calendars**. If not, simply click the calendars to select or deselect them.
2. At the top of the calendar view, select the time frame you want to print; for example, select **Day** or **Week**.
3. Click the **More button**, and select **Print**. In the **Calendar Print Preview** window, you can select a font size, page orientation, and other options.
4. Select the options you want, and then click **Print**.

**Customize your Calendar view**

**Quickly view just one calendar**

If you have several calendars open and want to quickly view just one of them, click the down arrow next to the calendar you want to view, and select **Display only this calendar**.
When you want to show additional calendars, click the names of the calendars to highlight them.

**Show an additional time zone**

If you work with colleagues or clients in multiple time zones, scheduling meetings can sometimes be confusing. To make your job easier, on your calendar, you can display another time zone in addition to your current time zone.

Here’s how:

1. Select **Settings** from the **Settings** gear drop-down in the upper right corner of your screen.
2. On the **General** tab, click **Show an additional time zone**.
3. Choose a time zone from the **Additional time zone** drop-down. (To see time zones outside your country, check the **Display all time zones**.)
4. Type a name in the **Label** field.
5. Click **Save**. Your calendar will now display both time zones, as in the example below.

![Additional time zone settings](image)

**Note:** See the *Specify the event time zone* section above for an easy way to schedule events in another time zone.

### Hide declined meetings

If your calendar is cluttered with meetings you have declined, you can change your settings to hide all declined meetings. There is no way to hide individual declined meetings.

1. Select **Settings** from the **Settings** gear drop-down in the upper right corner of your screen.
2. On the **General** tab, under **Show events you have declined**, select **No**.
3. Click **Save**.
Turn off automatically adding invitations to your calendar

1. Select **Settings** from the **Settings** gear drop-down in the upper right corner of your screen.
2. On the **General** tab, under **Automatically add invitations to my calendar**, select **No, only show invitations to which I have responded**.

**Note:** If your manager has set up his or her calendar to show only invitations to which he or she has responded, your manager might miss a scheduled event. For example, if you schedule a meeting for your manager, but don’t send an email invitation, your manager will never learn of the meeting unless you specifically tell him or her about it.

Optimize Calendar load time

If your Calendar account consistently takes a long time to load, check to see how many calendars you have in your **Other calendars** list. Having multiple calendars in your **Other calendars** list makes overlaying those calendars very convenient. However, having too many calendars in this list can increase the load time for your calendar.

To hide a calendar from your **Other calendars** list, click the down arrow to the right of the calendar owner’s name, and then select **Hide this calendar from the list**.

Create new calendars

There are many reasons you might want to create and share calendars. For example, you might want to create:

- team calendars to keep track of meetings, trainings, birthdays, vacations, and more
- calendars for your manager’s personal events (such as season tickets or fitness classes), which you can overlay with your manager’s work calendar to make scheduling early/late meetings or business trips easier
- calendars for rooms or resources that YOU control

Create a new calendar

1. Click the the small down arrow next to **My calendars** and select **Create new calendar**.
2. Enter a name for your calendar in the **Calendar Name** field.
3. If desired, enter the description, location, and time zone in the appropriate fields.
4. If you want to share your new calendar with the public or with everyone within your organization, click the **Share this calendar with others** box, and then click either the public or organization box.
5. If you want to share the calendar with a specific person, enter his or her email address in the **Person** field and select the appropriate permission from the **Permission Settings** drop-down. Repeat for each additional person you want to add.

6. Click **Create Calendar**.

Create a calendar for a room or resource that you control

If you manage the schedule of any private rooms or resources that aren't available through the **Where** section of your Google calendar, you can create a resource calendar.

To create a resource calendar, follow the instructions above for creating any new calendar. Once you've created the calendar, you'll need to adjust the settings. Here's how:

1. Click the small down arrow next to your new resource calendar, and select **Calendar settings**.
2. In the **Auto-accept invitations** section, click the radio button next to the option that's right for your calendar.

   Here's an explanation of the two applicable options:

   - **Auto-accept invitations that do not conflict**: New events are declined if an event is already scheduled at the same time.
   - **Automatically add all invitations to this calendar**: All events appear, regardless of conflicts.

3. Click **Save**.

There are two options for other people to schedule events on the resource calendar that you control:

**Option 1. Allow other people to edit all events**

If you want other people to be able to make changes directly to the resource calendar, you can share the calendar with them in the same way your manager shared his or her calendar with you.

**Note:** From the **Permission Settings** drop-down, you'll need to select either **Make changes to events** or **Make changes AND manage sharing**.

**Option 2. Allow other people to only edit their own events**

However, if you want people to only be able to edit their own events and not those created by others, then there's a different way for them to schedule events.
1. For this method, you'll need to make sure that you've selected the **Share this calendar with others** box under the **Share this Calendar** tab for your resource calendar.

2. Send the calendar's email address to people who can schedule on the resource calendar. The calendar's email address is found in **Calendar settings > Calendar Details** in the **Calendar Address** section.

3. When other people want to schedule the resource that you manage, they can add the calendar's email address in the **Guests** field of their event.

---

**Calendar Tips & Tricks**

**Save time with Calendar keyboard shortcuts**

You can save time managing your manager's calendar (and your own) by using keyboard shortcuts.
To enable keyboard shortcuts, select **Settings** from the **Settings** gear drop-down in the upper right corner of your screen.

Once you've enabled keyboard shortcuts, you'll be able to perform common tasks without moving your hands from the keyboard. For example, type “c” to create an event, “e” to see event details, “t” to go to today’s date, “p” to go to the previous period, “n” to go to the next period, “s” to go to your Calendar account settings, and much more.

While working in Google Calendar, type “Shift+?” at any time to display a complete list of keyboard shortcuts (keyboard shortcuts must first be enabled).

**Use Tasks in Calendar**

Create to-do lists and keep yourself on track by using Tasks in Calendar. To get started, just click **Tasks** under the **My Calendars** section.

Your Tasks list will display to the right of your calendar.
To close your Tasks list, click **Tasks** under the **My Calendars** section again.

Alternatively, to *minimize* your Tasks list, click the small arrow between the Calendar vertical scroll bar and your Tasks list. (You can click it again when you want to expand/maximize your Tasks list.)

You can create a new task in Calendar the same way you can in Gmail: just click the + sign at the bottom of the Tasks section. However, the task won't display on the Tasks calendar itself unless you modify it and add a date.

To add a task directly to the Tasks calendar and list:

1. Determine the day on which the task should begin, and click in the area directly below the date.
2. Click **Task** on the pop-up window.

3. Give the task a name and include any notes you wish to add.

4. Click **Create task**. The task will now appear both on the Tasks calendar and in the Tasks list.

To learn more about the Tasks gadget, visit the Google Calendar Help Center: [http://www.google.com/support/calendar/bin/answer.py?answer=146986](http://www.google.com/support/calendar/bin/answer.py?answer=146986)

**Add interesting calendars from Google Calendar**

Google has a number of useful and interesting calendars—such as international holidays and week numbers—that you can add to your **Other calendars** section for easy viewing.

To add these (and other) calendars to your own account:

1. Click the small down arrow to the right of **Other calendars**, and choose **Browse Interesting Calendars** from the drop-down.
2. Choose which type of calendar you want to add, and click the corresponding tab: **Holidays, Sports**, or **More**.
3. Click **Subscribe** to add specific calendars to your **Other calendars** list.

**Note:** Many admin-friendly calendars can be found on the **More** tab:

- Resources for [your domain]
- Week Numbers
• Contacts’ birthdays and events

Add calendars for favorite resources (conference rooms)

If there are certain conference rooms you frequently use, you can add their calendars to your list of Other calendars for fast and convenient viewing.

To add these (and other) calendars to your own account:

1. Click the small down arrow to the right of Other calendars, and choose Browse Interesting Calendars from the drop-down.
2. Click the More tab, and then click Resources for [your domain].
3. To the right of the resource name, click the arrow (>).
4. Click Subscribe to add specific calendars to your Other calendars list.

Include “Add to my calendar” link in emails

If you want to notify a large group of people about an event but don’t want to clutter their calendars with unwanted invitations, you can insert a special link into informational emails. If recipients are interested in the event, they can then click the link to add the event to their own calendars. You should use this method only if tracking attendance isn’t important.

To include an Add to my calendar link in emails:

1. In your Google Calendar account, create the calendar event as you normally would and save it.
2. Open the event details page, and below the Privacy options, click Publish event.

3. You have two options for inserting the link into your informational email: Option 1 allows you to insert a customizable text link, and Option 2 allows you to insert a Google Calendar button.

   Option 1. Copy the URL to make a text link
Copy the unique URL that appears between the two quotation marks following the href attribute. (Make sure not to copy the quotation marks themselves.) In the following example, you would want to copy the highlighted text.

**Option 2. Copy the Google Calendar icon to make an image link**

Alternatively, highlight the Google Calendar button by left-clicking your mouse and dragging your mouse across it. Then, type Ctrl+C to copy it.

4. In your Gmail account, begin composing your informational email.

**Option 1. Copy the URL to make a text link**

If you've chosen Option 1, type the text you want to use for your link (such as *Add this event to my calendar*). Highlight the text, and click the **Link** symbol, as seen in the image. Then, paste the calendar URL into the box below **To what URL should this link go?** and click **OK**.
Option 2. Copy the Google Calendar icon to make an image link

If you've chosen Option 2, simply type Ctrl+V to paste the icon into your email. Make sure to link the image to the correct event.

5. After you've created your text or image link, finish composing your email as usual.
Note: If you update your event after sending out the informational email, people who have added the event to their own calendars won't receive your update.

Calendar Labs

If your Google Apps administrator has enabled the Calendar Labs options for your domain, you can add key business functionality to your email and calendar with these experimental, pre-release features.

To help you get started, we've put together a list of the labs we think you'll find useful (some are real time savers!). It's important to remember, though, that a lab can become unstable, stop working, or disappear at any time—they are experiments, after all.

Enable Labs

You can enable or disable a lab whenever you like. Here's how:

1. In Google Calendar, click the Settings gear, and select Labs.
2. For each lab you want to use, click Enable. If you want to stop using a lab, click Disable.
3. Click Save at the top or bottom of the page.

Suggested Calendar Labs

<table>
