Dr. Leslie Calman is the President of Engineering World Health, a non-profit organization that inspires, educates, and empowers the biomedical engineering community to improve health care delivery in the developing world. EWH’s signature program is the Summer Institute, which sends engineering and science students from the U.S. and Europe to countries in Africa and Latin America, where they spend two months in under-resourced hospitals, installing and fixing vital medical equipment. EWH has 50 university chapters around the world and has run programs in 6 countries – Ghana, Cambodia, Rwanda, Ethiopia, Nigeria and Honduras – training in-country biomedical engineering technicians, in order to create sustained healthcare capacity.
