

Introduction: Lightning Talks

Department of Computer Science and Statistics

2023

Krishna Venkatasubramanian☼

Jing Wu☂

☼ Graduate Director, Computer Science, ☂ Graduate Director, Statistics

THINK BIG  WE DO™

What are lightning talks?

- Lightning talks are intended to inform students (both graduate and undergraduate) about the research going on our department
- The idea is for professors in the department to give a quick (5-minute) pitch about their research work/projects
- There won't be much time for questions. So taking notes would be helpful!

How should you use the information you get here?

- As you hear each professor, see if any of the project they are working on, or their general research area interests you
- If it does, feel free to contact the professor(s) and talk to them about the common interests
- For PhD and MS (thesis) students this is particularly important as:
 - you need to **find your advisor** as soon as possible to be able to start with your research work

Major areas of CS research

- In **computer science**, some of the major areas of research include: algorithms, accessibility, computer algebra, computational biology, CS education, computer vision, data science/machine learning, databases, digital forensics, human-computer interaction, programming languages, and simulation.

What if I miss something

- If you miss something that a professors talked about, you can find more information about the various labs and research groups in the department at:

<https://web.uri.edu/cs/research/>

Statistics information

- Major areas of departmental research include Bayesian inference, big data analysis, biostatistics, high dimensional inference, machine learning, missing data analysis, network data analysis, nonparametric statistics, precision medicine, spatio-temporal data analysis, time series analysis, ...
- Several professors also work at the intersection of statistics and computer science.

Statistics Graduate Courses

Spring 2024

STA 545 Bayesian Statistics
STA 542 Categorical Data Analysis
STA 592 Survival Analysis
STA 592 Advanced Inference

Fall 2024

STA 502 Applied Regression Analysis
STA 500 Analysis of Missing Data
STA 525 Programming and Data Management in SAS
STA 585 Network Data Analysis
STA 560 Time Series Analysis

STA 515 Spatial Data Analysis
STA 536 Applied Longitudinal Analysis
STA 550 Ecological Statistics

Time	Faculty Name
12:30-12:35	Tim Colaneri (CS)
12:35-12:40	Yichi Zhang (Stats)
12:40-12:45	Lisa DiPippo (CS)
12:45-12:50	Gavino Puggioni (Stats)
12:50-12:55	Sarah Brown (CS)
12:55-1:00	Jing Wu (Stats)
1:00-1:05	Mark Yu (Stats)
1:05-1:10	Noah Daniels (CS)
1:10-1:15	Shaun Wallace (CS)
1:15-1:20	Ed Lamagna (CS)
1:20-1:25	Jean-Yves Hervé (CS)
1:25-1:30	Krishna Venkatasubramanian (CS)
1:30-1:35	Guangyu Zhu (Stats)
1:35-1:40	Vic Fay-Wolfe (CS)
1:45-1:50	Abdeltawab Hendawi (CS)
1:50-2:00	GAU Rep

ASTEROID

TOWARDS PROGRAMMING WITH FIRST-CLASS PATTERNS

- Asteroid is an open source, dynamically typed, multi-paradigm programming currently under development here, at the University of Rhode Island.
- Asteroid supports patterns as first-class citizens enabling whole new ways of solving problems.
- In this new programming paradigm, patterns and pattern-matching are supported by all major programming language constructs, making programs succinct and robust.

```
let POS_INT = pattern with (n:%integer) %if n > 0.  
let NEG_INT = pattern with (n:%integer) %if n < 0.
```

Running Asteroid

```
$ asteroid  
Asteroid Version 1.0.0  
Run "asteroid -h" for help  
Press CTRL+D to exit  
> load system io.  
> io @println "Hello, World!".  
Hello, World!  
>
```

```
function fact  
  with 0 do  
    return 1  
  orwith *POS_INT do  
    return n * fact (n-1).  
  orwith *NEG_INT do  
    throw Error("undefined for "+n).  
end.
```

```
function sign  
  with 0 do  
    return 0.  
  orwith *POS_INT do  
    return 1.  
  orwith *NEG_INT do  
    return -1.  
end.
```

Assistant Professor
University of Rhode Island

I currently hold the position of Assistant Professor in the Department of Computer Science and Statistics at the University of Rhode Island, along with serving as a Visiting Scientist at Department of Neurology, Boston Children's Hospital, Harvard Medical School.

My research centers around the convergence of machine learning and statistics. I specialize in developing methods and algorithms for the analysis of high-dimensional and intricately structured datasets. Throughout my scientific journey, I have consistently engaged in collaborative research ventures with experts from diverse applied scientific domains, offering invaluable statistical insights. I am committed to delivering top-tier statistical support.

As I continue to progress in my academic career, I am enthusiastic about expanding my research portfolio. I eagerly anticipate fostering collaborations with fellow researchers spanning various fields, including machine learning, genetics, and epidemiology.

URI Center for Computational Research (CCR)

Research Computing, ITS, AI lab

For URI researchers:

- HPC support through local clusters and the MGHPCC (Mass. Green High Performance Computing Center); quantum computing support through partnership with IBM
- Expert support and funding for *interdisciplinary data enabled* research – all disciplines – all colleges.
- Speed networking and lightning talk events
- Featured speaker series and Fireside Chats - AI, Ethics, Team formation ...
- Collaborative with URI AI Lab, and the AI and Business Analytics group in the College of Business

Check us out: <https://its.uri.edu/center-for-computational-research/>

Few words about my research

Gavino Puggioni, Ph.D.

Dept. of Computer Science and Statistics, and CELS

Current Research

- Innovation in Bayesian modeling, novel stochastic processes
- Space and time data analysis in different areas of applications: ecology and the environment, medical data, spread of infectious diseases, finance
- Hybrid stochastic machine learning models

I would like to supervise...

- One Ph.D. student with the following skills and interests:
 1. Strong mathematical and statistical background
 2. Proficient in coding (R or Python)
 3. An interest in learning new material in different scientific areas
 4. Comfortable reading scientific articles
 5. Academic career oriented

Statistical tool manufacturer

Mark (Haihan) Yu

October 25, 2023

Manufacture statistical tools

- ▶ Invent new statistical tools for challenging data problems, such as
 - ▶ construct new estimator or test statistics;
 - ▶ provide new inference procedures;
 - ▶ ...
- ▶ Improve an existing statistical tool from multiple perspectives, including:
 - ▶ extend its range of applicability;
 - ▶ investigate its mechanism under unconventional settings;
 - ▶ ...

More specifically

I have been working on

- ▶ Nonparametric inference tools \Rightarrow make inference based on data not on model
 - ▶ Bootstrap, resampling, subsampling, empirical likelihood
- ▶ Dependent data analysis \Rightarrow time series
 - ▶ spectral analysis, change-point problem
- ▶ Open to all interesting problems...

My goal is to develop **user-friendly** and **theoretically compact** statistical tools.

Thank you!

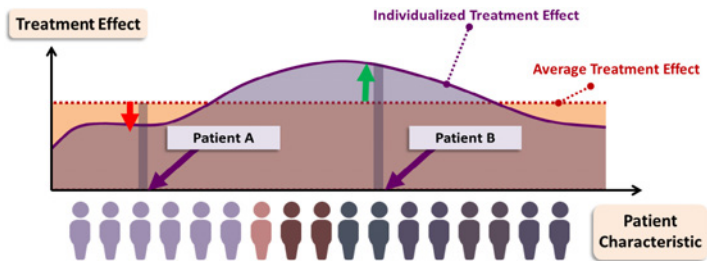

A Brief Overview of My Research

Yichi Zhang
yichizhang@uri.edu

October 27, 2023

Precision Medicine

- ▶ Individualized treatment rules: the right treatment for the right patient at the right time.
- ▶ Reinforcement learning:
 - ▶ Unlike supervised learning, we don't observe the optimal treatment for each patient.
 - ▶ Unlike unsupervised learning, we do observe some outcome related to the treatment.

Source: Bica, I., Alaa, A. M., Lambert, C., & Van Der Schaar, M. (2021). From real-world patient data to individualized treatment effects using machine learning: current and future methods to address underlying challenges. *Clinical Pharmacology & Therapeutics*, 109(1), 87–100.

Precision Medicine

- ▶ Longitudinal data: Inference for long-term effects.
- ▶ Inference for the cutoff value: suppose an aggressive treatment is recommended for younger patients while a conservative treatment is recommended for elder patients. The estimated cutoff value doesn't follow a normal distribution.
- ▶ Design of experiment: can we do better than a randomized study?
- ▶ Sample splitting: can we make inference about the treatment effects when some parts of the model uses machine learning techniques?
- ▶ Interpretability: can we approximate a rule by a tree or a decision list?
