Providence, Rhode Island 02908

Re: Draft 2022 RIPDES Small MS4 Annual Report – RIPDES Permit No. RIR040019

Dear Ms. Chatterton:

Enclosed please find the draft 2022 RIPDES Small MS4 Annual Report for the University of Rhode Island. Public notice of the availability of the draft report for public review appeared in the most recent edition of The Good 5¢ Cigar (March 9, 2023). As noted in the public notice announcement, the draft report will be posted to the URI website at https://web.ur.edu/facilities/utilities.

Please let me know if you have questions or comments regarding any of the information provided within this report. You can reach me at (401) 874-2448 or at alharvey@uri.edu.

Sincerely,

Angela Harvey, MSE, MPA
Manager, Utilities and Environmental Compliance
Facilities Operations
University of Rhode Island

cc: Robert Bozikoswki, URI

CERTIFICATION

I certify under penalty of law that this document and all attachments were prepared under the direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, I certify that the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Print Name Angela Harvey

Print Title Manager, Utilities and Environmental Compliance

Signature  Date: 3/10/2023

MINIMUM CONTROL MEASURE #1:
PUBLIC EDUCATION AND OUTREACH (Part IV.B.1 General Permit)

SECTION I. OVERALL EVALUATION:

GENERAL SUMMARY, STATUS, APPROPRIATENESS, AND EFFECTIVENESS OF MEASURABLE GOALS:

Include information relevant to the implementation of each measurable goal, such as activities, topics addressed, audiences and pollutants targeted. Discuss activities to be carried out during the next reporting cycle. If addressing TMDL requirements, please indicate rationale for choosing the educational activity to address the pollutant of concern.

(Note: Identify parties responsible for achieving the measurable goals and reference any reliance on another entity for achieving measurable goals. Mark with an asterisk (*) if this person/entity is different from last year.)

Responsible Party Contact Name & Title: Angela Harvey -- Manager, Utilities and Environmental Compliance

Phone: 401-874-2448 **Email:** alharvey@uri.edu

IV.B.1.b.1	Use the space below to provide a General Summary of activities implemented to educate your community on how to reduce stormwater pollution. For TMDL affected areas, with stormwater associated pollutants of concern, indicate rationale for choosing the education activity. List materials used for public education and topics addressed. Summarize implementation status and discuss if the activity is appropriate and effective.

Note: Certain activities historically conducted to fulfill the above continued to be restricted into 2022 due to the impacts of COVID-19. Ongoing in 2022: the University requires certain staff employees to attend training sessions annually for the proper handling of contaminants and the proper disposal of contaminants. All employees are reminded that nothing can be disposed of into the storm drainage system. These safety sessions and presentations are conducted by the URI Safety and Risk Dept, with participation by the Stormwater Coordinator. The RI Stormwater Solutions website, developed by the URI Cooperative Extension, was transferred to RIDEM prior to 2022 where it continues to provide educational information on sources and impacts of stormwater, as well as steps that citizens and homeowners can take to reduce impacts such as reducing fertilizer use, keeping oil out of storm drains, using water wisely, cleaning up pet waste, and recycling rainwater. Links to the website (https://dem.ri.gov/environmental-protection-bureau/water-resources/outreach-education/ri-stormwater-solutions-water-2) are available on other URI sites where subject matter deems it appropriate. URI continues to work to mitigate elevated concentrations of sodium and chloride in its water supply, stressing a deicing salt best management policy to educate staff and implement techniques to use salt in ways that lessen the impact on campus stormwater systems and on the groundwater aquifer. In addition, the MS4 coordinator meets annually with those responsible for snow removal to ensure adherence with the RIDEM snow removal policy. As of December 2022, the Utilities Department was finalizing its stormwater website that will be directly accessible through the utilities and sustainability websites, with links provided to other departments where subject matter deems it appropriate. We anticipate that the website will become live in spring 2023. Midway through 2022 URI's Sustainability Officer accepted another position, resulting in a vacancy that continued through the end of 2022. This position plays a critical role in sustainability outreach, which includes stormwater protection. We recognize that a stronger collaboration between the Stormwater Coordinator and Sustainability Officer positions, coupled with the easing of COVID-19 restrictions, would substantially enhance efforts to achieve the goals of Minimum Control Measure #1.

IV.B.1.b.2	Use the space below to provide a general summary of how the public education program was used to educate the community on how to become involved in the municipal or statewide stormwater program. Describe partnerships with governmental and non-governmental agencies used to involve your community.

Ongoing in 2022: To reduce the amount of trash entering the stormwater system, an ongoing contract for energy savings includes a behavior change measure that covers a range of environmental behaviors. Students are the target audience for this measure, and the goal is to increase their compliance with proper disposal of trash and recycling materials. URI continues to maintain and use the Rhode Island Stormwater Management and treatment Demonstration Facility (RI SDF) to evaluate BMP structures operating under local environmental conditions against manufacturer claims.
As discussed in IV.B.1.b.1, the Utilities Department in 2022 continued developing a stormwater website that will be directly accessible through the utilities and sustainability websites. This website will include pertinent information on community involvement in the URI or statewide stormwater program.

Check all topics that were included in the Public Education and Outreach program during this reporting period. For each of the topics selected, provide:
Target Audience(s): Public Employees, Residents, General Public, Businesses, Industries, Restaurants, Contractors, Developers, Agriculture, Other (describe);
Target Pollutant(s): (e.g. pet waste, fertilizers, Total Suspended Solids, etc.);
Strategies/Media: Direct Mailings, List Servs, Kiosks or Other Displays, Newspaper Ads or Articles, Public Events or Presentations, School Programs, Printed Materials, Direct Trainings, Videos, Webpage, Other (describe)

Topic	Target Audience(s)	Target Pollutant(s)	Strategies/Media
x Construction Sites	Contractors, URI staff	Erosion and water quality	Meeting with contractors, subs, and URI PMs; submittal of weekly inspection reports
x Pesticide and Fertilizer Application	URI staff	Pesticides, herbicides and fertilizers	Safety Data Sheets, Direct, meetings/discussions with key staff
x General Stormwater Management Info	URI community	Watershed protection	Websites (sustainability, NEMO, RI Stormwater Solutions)
x Pet Waste Management	URI community	Bacterial pollution	Websites
x Household Hazardous Waste Disposal	URI staff	Hazardous materials	SPCC management strategies
x Recycling	URI community	Conservations of resources, pollution prevention	Sustainability outreach
x Illicit Discharge Detection and Elimination	URI staff	All prohibited	Direct training
☐ Riparian Corridor Protection/Restoration	NA		
x Infrastructure Maintenance	URI staff	Sediments	Annual inspections, cleaning, repair
x Trash Management	URI staff	Bulk waste and recycling	Direct training
x Smart Growth	URI staff	Increased runoff	Management by URI PMs
x Vehicle Washing	URI staff, contractors	All prohibited	Direct trainings
x Storm Drain Marking	URI staff	All prohibited	Identification of key locations via mapping
x Water Conservation	URI community	Runoff	Websites
x Green Infrastructure/Better Site Design/LID	URI staff	Increased runoff	Websites

Note: URI community includes students, staff, faculty, and those performing work on campus.

Please list all stormwater training attended by your staff during the 2022 calendar year and list the name(s) and municipal position of all staff who attended the training.

Angela Harvey, Stormwater Coordinator, USEPA Construction Inspection Training Course, annual SPCC training.

MINIMUM CONTROL MEASURE #2:
PUBLIC INVOLVEMENT/PARTICIPATION (Part IV.B.2 General Permit)

SECTION I. OVERALL EVALUATION:

GENERAL SUMMARY, STATUS, APPROPRIATENESS AND EFFECTIVENESS OF MEASURABLE GOALS:

Include information relevant to the implementation of each measurable goal, such as types of activities and audiences/groups engaged. Discuss activities to be carried out during the next reporting cycle. If addressing TMDL requirements, please indicate rationale for the activities chosen to address the pollutant of concern.

(Note: Identify parties responsible for achieving the measurable goals and reference any reliance on another entity for achieving measurable goals. Mark with an asterisk (*) if this person/entity is different from last year.)

Responsible Party Contact Name & Title: Angela Harvey -- Manager, Utilities and Environmental Compliance

Phone: 401-874-2448 **Email:** alharvey@uri.edu

IV.B.2.b.2.ii	Use the space below to describe audiences targeted for the public involvement minimum measure, include a description of the groups engaged, and activities implemented and if a particular pollutant(s) was targeted. If addressing TMDL requirements indicate how the audience(s) and/or activity address the pollutant(s) of concern. Name of person(s) and/or parties responsible for implementation of activities identified. Assess the effectiveness of BMP and measurable goal.

Note: Certain activities historically conducted to fulfill the above continued to be restricted into 2022 due to the impacts of COVID-19. In addition, the Sustainability Officer, who partners with the Stormwater Coordinator to implement Minimum Control Measure #2, left URI service midway through 2022, with the position remaining vacant through the end of 2022.

Audiences targeted for public participation typically include students living on campus, especially the freshman students new to the campus, as well as faculty and support staff. Support staff members are required to attend annual review sessions on the prohibition of illicit discharges into the storm drainage system and the proper handling and disposal of all materials. In 2022, public participation included the following:

*In-person training for URI staff subject to the requirements of the SPCC, which includes specific discussion on the potential impacts to stormwater associated with inappropriate management of regulated materials. Training also includes discussion on non-SPCC materials. Participation by staff in fulfilling the requirements of Minimum Control Measure #2 is via implementation of proper procedure daily in the performance of assigned tasks.

*Student participation during 2022 was limited to participation by students assigned to the Utilities Office. The students received extensive training in stormwater-related issues and tasks, with students participating in the following critical activities under the supervision of the Stormwater Coordinator:
1. Outfall inspections.
2. BMP inspections.
3. Catch basin inspections
4. Assistance with MS-4 Website development
5. Research to support program activities

Opportunities provided for public participation in implementation, development, evaluation, and improvement of the Stormwater Management Program Plan (SWMPP) during this reporting period. Check all that apply:

- ☐ Cleanup Events
- ☐ Comments on SWMPP Received
- ☐ Community Hotlines
- ☐ Community Meetings
- ☒ Other (describe)
- ☐ Storm Drain Markings
- ☐ Stakeholder Meetings
- ☐ Volunteer Monitoring
- ☐ Plantings

Additional Measurable Goals and Activities
As described under Section IV.B.2.b.2.ii.

SECTION II. Public Notice Information (Parts IV.G.2.h and IV.G.2.i)

Was the availability of this Annual Report and the Stormwater Management Program Plan (SWMPP) announced via public notice? ☒ YES ☐ NO	If YES, Date of Public Notice: 3/9/2023 (copy attached)
How was the public notified: ☐ List-Serve (Enter # of names in List: _____) ☐ TV/Radio Notices ☒ Website ☒ Newspaper Advertising ☐ Town Hall posting ☐ Other: Enter Web Page URL: https://web.uri.edu/facilities/utilities/	
Was public meeting held? ☐ YES ☒ NO Date:	Where:
Summary of public comments received:	
Planned responses or changes to the program:	

MINIMUM CONTROL MEASURE #3:
ILLICIT DISCHARGE DETECTION AND ELIMINATION (Part IV.B.3 General Permit)

SECTION I. OVERALL EVALUATION:

GENERAL SUMMARY, STATUS, APPROPRIATENESS AND EFFECTIVENESS OF MEASURABLE GOALS

Include information relevant to the implementation of each measurable goal, such as activities implemented (when reporting tracked and eliminated illicit discharges, please explain the rationale for targeting the illicit discharge) to comply with on-going requirements, and illicit discharge public education activities, audiences and pollutants targeted. Discuss activities to be carried out during the next reporting cycle. If addressing TMDL requirements, please indicate rationale for the activities chosen to address the pollutant of concern.

(Note: Identify parties responsible for achieving the measurable goals and reference any reliance on another entity for achieving measurable goals. Mark with an asterisk (*) if this person/entity is different from last year.)

Responsible Party Contact Name & Title: Angela Harvey -- Manager, Utilities and Environmental Compliance

Phone: 401-874-2448 **Email:** alharvey@uri.edu

Has *this person* received training on Illicit Discharge Detection and Elimination (IDDE)? Yes

If yes, when and where? BS Civil Engineering 2007 URI, MS Civil & Environmental Engineering 2010 URI

If no, who *is* trained on IDDE?

IV.B.3.b.1:	If the outfall map was not completed, use the space below to indicate reasons why, proposed schedule for completion of requirement and person(s)/ Department responsible for completion. (The Department recommends electronic submission of updated EXCEL Tables if this information has been amended.) **Number of Outfalls Mapped within regulated area:** 77 **Percent Complete:** 100% **If 100% Complete, Provide Date of Completion:** November 2021, ongoing revisions as required

Outfall Location Tables were included with the Year 5 report. The outfall map was updated in 2013 and was submitted to DEM as part of the 2013 report and again updated in 2020 and submitted as part of the 2020 report. The Utilities Office used the original information from our consultant for the initial outfall map. From 2012 through 2020 the Utilities Office expanded the list from field observations during inspections, new construction, and review of plans. The list was refined again in 2022 to better differentiate between outfalls to bodies of water/wetlands via point or non-point discharges, and daylighted pipes or other structures that are simply discharging to BMPs for infiltration or conveyance into another portion of URI's stormwater system. Those that fall into the second category are highlighted in blue in the attached outfall inspection tables for 2022 and will be incorporated into the BMP inventory list for 2023.

IV.B.3.b.2	Indicate if your municipality chose to implement the tagging of outfalls activity under the IDDE minimum measure, activities and actions undertaken under the 2022 calendar year.

The University Utilities Office implemented the tagging of outfalls under the IDDE minimum measure requirements and completed the tagging in 2008. Existing outfalls were subsequently geolocated and entered into a GIS database. New outfalls are tagged as they are identified and added to that database.

IV.B.3.b.3	Use the space below to provide a summary of the implementation of recording of system additional elements (catch basins, manholes, and/or pipes). Indicate if the activity was implemented as a result of the tracing of illicit discharges, new MS4 construction projects, and inspection of catch basins required under the IDDE and Pollution Prevention and Good Housekeeping Minimum Measures, and/or as a result of TMDL related requirements and/or investigations. Assess effectiveness of the program minimizing water quality impacts.

The Kingston Campus drainage system and its records were most recently updated during 2020. The entire drainage system is mapped in GIS and is updated upon completion of project either by physical inspection and/or following review of as-built plans. Projects that commenced after 2020 are updated as completed if simple in nature, or after receipt of as-built plans. Alterations detected during routine inspections are incorporated into the GIS database and likewise GIS mapping.

IV.B.3.b.4	Indicate if the IDDE ordinance was **not** developed, adopted, and submitted to RIDEM, explain reasons why, submit proposed schedule for completion and identify person(s) / Department and/or parties responsible for the completion of this requirement. **Date of Adoption:** see below If the Ordinance was amended in 2022, please indicate why changes were necessary.
The University of Rhode Island did not develop this ordinance in the 2022 calendar year. The University owns the entire subject area and controls all activities on the property. The University is a state agency that has policies in place to ensure proper compliance to prohibit and enforce illicit discharges to the MS4. Policy enforcement is through a combination of inspections by the Safety and Risk Management and Facilities Operations departments. The SR&M department receives, responds, investigates, and files all incidents involving suspected hazmat and other illicit discharge activities that are reported on campus. Investigations, corrective actions, and enforcement activities are monitored and implemented through this office. URI also conducts annual inspections throughout the campus for potential illicit discharges into the storm and wastewater systems. We have developed a Spill Prevention and Containment Plan as required by the EPA that is designed to reduce the potential for illicit discharges into the sanitary and stormwater systems. The SPCC was updated in 2022 with participation by the URI Stormwater Coordinator.	
IV.B.3.b.5.ii, iii, iv, & v	Use the space below to provide a summary of the implementation of procedures for receipt and consideration of complaints, tracing the source of an illicit discharge, removing the source of the illicit discharge and program evaluation and assessment as a result of removing sources of illicit discharges. Identify person(s) / Department and/or parties responsible for the implementation of this requirement.
All complaints of any nature are routed through the University's Control Center. The Control Center logs each call and then notifies the appropriate department responsible for the complaint. If the complaint is relative to an illicit discharge to the storm system, the URI Utilities Office is responsible for investigating, which includes tracing the origin of the illicit discharge, ensuring that the illicit discharge is stopped immediately, and assessing if other preventative measures need to be implemented. Incidents in 2022 were as follows: *On February 10, 2022, a release of diesel and hydraulic oil from heavy equipment stored for snow removal, which possibly occurred while filling the equipment, was reported at Meade Stadium, which is located along West Alumni on the western side of the campus. Cleanup generated 9 drums of oily soil and one drum of cleanup debris (booms, gloves, etc.). The excavation area was 9' x 4' to a depth of one foot. Samples from the excavation were collected for TPH analysis (one from each side and from the bottom). All results were non-detect. Based on the limited size of the spill and confirmatory results, Safety & Risk Management opined that there was no release to the stormwater system and no potential for future impact to the system resulting from the spill and managed the cleanup and associated compliance requirements. The Utilities Office concurred with the finding of no potential impacts to the stormwater system. Proper protection of stormwater infrastructure during refueling operations and equipment storage was reviewed in annual training, which is described elsewhere in this report. *On December 15, 2022, the Utilities Office during an inspection observed suds in a single catch basin immediately adjacent to the Hope Dining Facility on the south side of the facility. Suds were not observed in infrastructure upgradient or downgradient of the catch basin. The Utilities Office reviewed the construction plans and found no cross-connection between the sanitary sewer and the stormwater system. The Utilities Office discussed the observation with the Dining Services Supervisor given the location of the catch basin proximate to the kitchen area. Utilities staff discussed the appropriate disposal of wash bucket wastewater and was assured that staff would be instructed in proper disposal. There have been no additional reports or similar observations at this location on return visits by Utilities staff. Based on the volume of suds, the release appeared to be of a *de minimis* nature for which reporting was not required as defined under the general permit. *On December 15, 2022, the Utilities Office received a report of paint in a catch basin between Morrill and Pastore halls. Utilities Office staff responded to the report and removed approximately 8 ounces of latex paint product that was retained in a trapping hood. The Utilities Office staff removed the product and confirmed that no additional product or sheen was present in the catch basin. An investigation concluded that the source of the paint was most likely a contractor who was painting earlier in the day. The Utilities Office contacted the URI Project Manager responsible for the project and asked that proper paint disposal procedures be discussed with the contractor. There has been no additional observation of paint in any catch basin since the initial observation was reported. Given the small amount of product present, the release appeared to be of a *de minimis* nature below the threshold requiring reporting under the general permit.	
IV.B.3.b.5.vi	Use the space below to provide summary of implementation of catch basin and manhole inspections for illicit connections and non-stormwater discharges. If the required measurable goal of inspecting all catch basins and manholes for this purpose was not accomplished, please indicate reasons why, the proposed schedule of completion and identify person(s) / Department and/or parties responsible for the implementation of this requirement. Evaluate effectiveness of the implementation of this requirement. The operator must keep records of all inspections and corrective actions required and completed. **Number of Catch Basins and Manholes Inspected for illicit connections/IDDE:** 840 **Percent Complete:** 97% **Date of Completion:** 12/17/2022

During 2022, the URI Utilities Office inspected all catch basins that were accessible throughout the Kingston Campus for illicit connections and non-stormwater discharges. Approximately 3% of the drainage structures were not accessible due primarily due to construction projects. The inspections were performed in conjunction with the surveying of the drainage system for inventory of the system and noting the condition of the structures and quantity of sediment contained within each basin. URI recorded the inspection results in an Excel table created in 2022 to evaluate the sediment accumulation patterns on campus. Catch basins with major structural deficiencies were repaired. Those requiring minor repairs will be scheduled for repair in spring 2023.

IV.B.3.b.5.vii	If dry weather surveys including field screening for non-stormwater flows and field tests of selected parameters and bacteria were not completed, indicate reasons why, proposed schedule for the completion of this measurable goal and person(s) / Department and/or parties for the completion of this requirement. Evaluate effectiveness of the implementation of this requirement. **The results of the dry weather survey investigations should be submitted to RIDEM electronically, if not already submitted or if revised since 2009, in the RIDEM-provided EXCEL Tables and should include visual observations for all outfalls during both the high and low water table timeframes, as well as sampling results for those outfalls with flow. The EXCEL Tables must include a report of all outfalls and indicate the presence or absence of dry weather discharges.** **Number of Outfalls Surveyed spring 2022: 77** **Number of Outfalls Surveyed fall 2022:** 77 **Percent Complete:** 100 % **Date of Completion:** Spring 2022: 5/2/2022[1] Fall 2022:12/21/2022[2] [1]Three outfalls were inspected beyond the established deadline for spring (4/30/2022) because 4/30 fell on a Saturday and the inspector required assistance in locating the three outfalls, which was completed on the next business day. URI believes that this delay does not affect the integrity of the data for these three points. [2]Please note that certain dry weather data electronically collected for outfalls for the period July 1-October 31 were lost. These data were collected again later in the period upon discovery of the lost data. Outfalls that are typically dry during the period July 1-October 31 were found to be dry during reinspection. Based on these observations, URI believes that the observations dated after November 1 reasonably represent conditions encountered earlier in the season.
The University collected water samples from four outfalls on 9/30/2022. The origin of the flow in all cases was traced back to groundwater or natural flow from wet areas. The water quality testing was performed by ESS Labs. Sampling results are listed in the 2022 Dry Weather Outfall Inspections spreadsheets. URI is currently evaluating the fecal coliform result reported for Outfall 042, which was elevated for this location. The findings of this evaluation will be reported in the 2023 report.	
IV.B.3.b.7	Use the space below to provide a description of efforts and actions taken as a result of for coordinating with other physically interconnected MS4s, including State and federal owned or operated MS4s, when illicit discharges were detected or reported. Identify person(s) / Department and/or parties responsible for the implementation of this requirement. Evaluate effectiveness of the implementation of this requirement.
During 2022 the University did not observe, nor were advised of, illicit discharges associated with other MS4s. However, the University is concerned about the potential for illicit discharges to our system given the condition of contributing properties not owned by the University. Of immediate concern is the interconnection located along Fortin Road that exists between the University of Rhode Island and South Kingstown-owned infrastructure crossing privately owned property identified as "The Emporium." Based on visual observation, URI believes that contributing properties, which include the poorly maintained Emporium property, may not be adequately maintaining their infrastructure, including catch basins and contributing areas, and potentially pose a threat to the quality of stormwater entering URI's stormwater system. Mitigating the potential impacts of these properties to URI's system will be a primary program goal for 2023.	
IV.B.3.b.8	Use the space below to provide a description of efforts and actions taken for the referral to RIDEM of non-stormwater discharges not authorized in accordance to Part I.B.3 of this permit or another appropriate RIPDES permit, which the operator has deemed appropriate to continue discharging to the MS4, for consideration of an appropriate permit. Identify person(s) / Department and/or parties responsible for the implementation of this requirement. Evaluate effectiveness of the implementation of this requirement.
The University did not refer any notices to RIDEM associated with non-stormwater discharges in 2022.	
IV.B.3.b.9	Use the space below to provide a description of efforts and actions taken to inform public employees, businesses, and the general public of hazards associated with illegal discharges and improper disposal of waste, as well as allowable non-stormwater discharges identified as significant contributors of pollutants. Include a description on how this activity was coordinated with the public education minimum measure and the pollution prevention/good housekeeping minimum measure programs. Identify person(s) / Department and/or parties responsible for the implementation of this requirement. Evaluate effectiveness of the implementation of this requirement.

All of the University's Facility Operations personnel must attend annual training on identifying the materials to which the employees are exposed, spill prevention plans, spill control procedures, and the proper means of material disposal. The University's Safety & Risk Dept. conducts numerous trainings throughout the year in proper disposal of general waste and hazardous waste. All employees working with the waste stream are required to attend refresher courses. Training includes a module to reinforce the fact that dumping anything down a storm drain is a violation of the law and employees could face disciplinary action for ignoring this requirement. Staff employees have been trained to comply with spill control procedures and the proper disposal of waste. All contractors working on campus are required per contract to properly dispose of all waste material and are allowed only permitted discharges into the storm drainage system. The University's Utilities Office, The Safety and Risk Department, and the Office of Capital Projects are tasked with implementing and monitoring these activities. Given the small number of reports we receive each year, we conclude that our implementation of this requirement has been effective but continue to stress the importance of following proper procedures when working with various materials.
Additional Measurable Goals and Activities

SECTION II.A Other Reporting Requirements - Illicit Discharge Investigation and System Mapping (Part IV.G.2.m)

# of Illicit Discharges Identified in 2022: 2	# of Illicit Discharges Tracked in 2022: 2
# of Illicit Discharges Eliminated in 2022: 2	# of Complaints Received: 3
# of Complaints Investigated: 3	# of Violations Issued: 0
# of Violations Resolved: 0	# of Unresolved Violations Referred to RIDEM: 0
Total # of Illicit Discharges Identified to Date (since 2003):11	Total # of Illicit Discharges remaining unresolved at the end of 2022: 0
Summary of Enforcement Actions: No enforcement actions were taken.	
Total # of Outfalls identified and mapped to date: 77 Total # of Interconnections with other MS4s identified and mapped to date: 2 Extent to which the MS4 system has been mapped (% complete): 100	

Identify how the following components of the MS4 system have been mapped:	Not mapped	GIS	Auto CAD	Paper	Other (please specify)
Catch basins	☐	☒	☐	☐	☐
Manholes	☐	☒	☐	☐	☐
Pipes, ditches, and other conduits	☐	☒	☐	☐	☐
Flow direction and connectivity	☐	☒	☐	☐	☐
Interconnections with other regulated MS4s	☐	☒	☐	☐	☐
MS4-owned stormwater controls (BMPs, not including catch basins or manholes)	☐	☒	☐	☐	☐
Delineation of outfall catchment/drainage areas	☐	☒	☐	☐	☐

SECTION II.B Interconnections (Parts IV.G.2.k and IV.G.2.l)

Interconnection:	Date Found:	Location:	Name of MS4:	Originating Source:	Planned and Coordinated Efforts and Activities with Connectee:
24" Storm Drain	2-8-11	Briar Lane	South Kingstown	Wetlands south of Briar Lane	Agreed to notify SK Engineer of any issues
12" Storm Drain	2-8-11	Fortin Road	South Kingstown	2 Catch Basins on Fortin Road	Agreed to notify SK Engineer of any issues

MINIMUM CONTROL MEASURE #4:
CONSTRUCTION SITE STORMWATER RUNOFF CONTROL
(Part IV.B.4 General Permit)

SECTION I. OVERALL EVALUATION:

GENERAL SUMMARY, STATUS, APPROPRIATENESS AND EFFECTIVENESS OF MEASURABLE GOALS:

Include information relevant to the implementation of each measurable goal, such as activities implemented to support the review, issuance and tracking of permits, inspections and receipt of complaints. Discuss activities to be carried out during the next reporting cycle. If addressing TMDL requirements, please indicate rationale for the activities chosen to address the pollutant of concern.

(Note: Identify parties responsible for achieving the measurable goals and reference any reliance on another entity for achieving measurable goals. Mark with an asterisk (*) if this person/entity is different from last year.)

Responsible Party Contact Name & Title: Angela Harvey -- Manager, Utilities and Environmental Compliance

Phone: 401-874-2448 **Email:** alharvey@uri.edu

IV.B.4.b.1	Indicate if the Sediment and Erosion Control and Control of Other Wastes at Construction Sites ordinance was **not** developed, adopted, and submitted to RIDEM, explain reasons why, submit proposed schedule for completion and identify person(s) / Department and/or parties responsible for the completion of this requirement. **Date of Adoption:** see below If the Ordinance was amended in 2022, please indicate why changes were necessary and provide references to the amended portions of the local codes/ordinances.

The University does not have a mechanism to develop ordinances. The University owns all of the subject area and controls all activities on its properties. The mechanism to ensure proper erosion and sediment controls and control of other wastes is our “General Plans and Specifications” developed for and under the direction of the Office of Capital Projects by an A/E firm. Under Division 2, Site Construction, we require erosion and sediment control as well as the control of other wastes. These requirements are site specific and are developed by the A/E firm for each project. The requirements are enforced and managed by the project manager of each construction project. If the requirements are not met, we impose corrective actions to bring the project back into compliance. Failure to comply with the contract requirements results in a breach of contract and is dealt with according to contract law.

IV.B.4.b.6	Use the space below to describe actions taken as a result of receipt and consideration of information submitted by the public.

Information from the public would be documented and evaluated by the University with a response provided after the evaluation. In 2022 the University did not receive any information or requests for information from the public.

IV.B.4.b.8	Use the space below to describe activities and actions taken as a result of referring to the State non-compliant construction site operators. The operator may rely on the Department for assistance in enforcing the provisions of the RIPDES General Permit for Stormwater Discharges Associated with Construction Activity to the MS4 if the operator of the construction site fails to comply with the local and State requirements of the permit and the non-compliance results or has the potential to result in significant adverse environmental impacts.

The University did not have any referrals to the State for assistance in enforcing any part of RIPDES General Permit for Storm Water Discharge Associated with Construction Activity to this MS4 in 2022.

Additional Measurable Goals and Activities

SECTION II. A - Plan and SWPPP/SESC Plan Reviews during Year 19 (2022), Part IV.B.4.b.2: Issuance of permits and/or implementation of policies and procedures for all construction projects resulting in land disturbance of greater than 1 acre. **Part IV.B.4.b.4:** Review 100% of plans and SWPPPs/SESC Plans for construction projects resulting in land disturbance of 1-5 acres, not reviewed by other State programs, must be conducted by adequately trained personnel and incorporate consideration of potential water quality impacts.

# of Construction Applications Received: 1 # of Construction Reviews Completed: 1 # of Permits/Authorizations Issued: 0
Summary of Reviews and Findings, include an evaluation of the effectiveness of the program. Application status: *RIR102405, Fine Arts, application in review at RIDEM as of the end of 2022, with RIDEM awaiting responses to comments re: wetlands deficiency Identify person(s) /Department and/or parties responsible for the implementation of this requirement: Angela Harvey – Manager, Utilities and Environmental Compliance, Utilities Department Ken Burke – Assistant Director of Capital Projects Identify the type and date of training this person(s)/parties has/have received to be considered "adequately trained": Angela Harvey – BS Civil Engineering 2007 URI, MS Civil & Environmental Engineering 2010 URI; USEPA Construction Inspection Training Course Ken Burke –Rhode Island registered Professional Engineer

SECTION II.B - Erosion and Sediment Control Inspections during Year 19 (2022), Parts IV.G.2.n and IV.B.4.b.7: Inspection of 100% of all construction projects within the regulated area that discharge or have the potential to discharge to the MS4. (The program must include two inspections of all construction sites, first inspection to be conducted during construction for compliance of the Erosion and Sediment controls at the site, the second to be conducted after the final stabilization of the site.) Inspections must be conducted by adequately trained personnel.

# of Active Construction Projects: 1	
# of Site Inspections: 1	# of Complaints Received: 0
# of Violations Issued: 0	# of Unresolved Violations Referred to RIDEM: 0
Summary of Enforcement Actions, include an evaluation of the effectiveness of the program. No enforcement actions were required for 2022. A Section II.B inspection was required for one project, identified as RIR102011, West Alumni/Plains Road Parking Lot Compliance with this requirement for this project was tracked through the following: *One Erosion and Sediment Control Inspection conducted by the Utilities Office on June 7, 2022. *Review by the Office of Capital Projects of weekly inspections conducted to fulfill the requirements of the General Permit for Rhode Island Pollutant Discharge Elimination System Stormwater Discharge Associated with Construction Activity. Identify person(s) /Department and/or parties responsible for the implementation of this requirement: Angela Harvey – Manager, Utilities and Environmental Compliance, Utilities Department Ken Burke – Assistant Director of Capital Projects Identify the type and date of training this person(s)/parties has/have received to be considered "adequately trained": Angela Harvey – BS Civil Engineering 2007 URI, MS Civil & Environmental Engineering 2010 URI; USEPA Construction Inspection Training Course (Fall 2022) Ken Burke –Rhode Island registered Professional Engineer	

MINIMUM CONTROL MEASURE #5:
POST CONSTRUCTION STORMWATER MANAGEMENT IN NEW DEVELOPMENT AND REVELOPMENT
(Part IV.B.5 General Permit)

SECTION I. OVERALL EVALUATION:

GENERAL SUMMARY, STATUS, APPROPRIATENESS AND EFFECTIVENESS OF MEASURABLE GOALS:

Include information relevant to the implementation of each measurable goal, such as activities implemented to support the review, issuance and tracking of permits, inspections and receipt of complaints, etc. Please indicate if any projects have incorporated the use of Low Impact Development techniques. Discuss activities to be carried out during the next reporting cycle. If addressing TMDL requirements, please indicate rationale for the activities chosen to address the pollutant of concern.

(Note: Identify parties responsible for achieving the measurable goals and reference any reliance on another entity for achieving measurable goals. Mark with an asterisk (*) if this person/entity is different from last year.)

Responsible Party Contact Name & Title: Angela Harvey -- Manager, Utilities and Environmental Compliance

Phone: 401-874-2448 **Email:** alharvey@uri.edu

IV.B.5.b.5	Use the space below to describe activities and actions taken to coordinate with existing State programs requiring post-construction stormwater management.
Long term BMP maintenance schedules are required to be included as part of the approval process for new development. Maintenance schedules are developed in accordance to the Rhode Island Stormwater design and Installation Standards Manual.	
IV.B.5.b.6	Use the space below to describe actions taken for the referral to RIDEM of new discharges of stormwater associated with industrial activity as defined in §1.4(A)(111) in the *Regulations for the Rhode Island Pollutant Discharge Elimination System* (RIPDES Regulations) (the operator must implement procedures to identify new activities that require permitting, notify RIDEM, and refer facilities with new stormwater discharges associated with industrial activity to ensure that facilities will obtain the proper permits).
There was no new industrial activity at this MS4 in 2022. Therefore, there were no referrals to the State for any new discharges of stormwater associated with industrial activity.	
IV.B.5.b.9	Indicate if the Post-Construction Runoff from New Development and Redevelopment Ordinance was **not** developed, adopted, and submitted to RIDEM, explain reasons why, submit proposed schedule for completion and identify person(s) / Department and/or parties responsible for the completion of this requirement. **Date of Adoption:** see below If the Ordinance was amended in 2022, please indicate why changes were necessary. Please also indicate if amendments have been made based on the 2010 *RI Stormwater Design and Installation Standards Manual*, and provide references to the amended portions of the local codes/ordinances.
The Post-Construction Runoff from New Development and Redevelopment Ordinance was not developed. The University does not have a mechanism to develop ordinances. The University owns the subject area and controls all activities on its property. The mechanism to ensure proper post construction erosion and sediment controls and control of other wastes post construction is also our “General Plans and Specifications” developed for and under the direction of the Office of Capital Projects by an A/E firm. Under Division 2, Site Construction, we require erosion and sediment control as well as the control of other wastes. Post construction requirements are included in the storm water prevention plans developed for each project by the A/E firm. The requirements are enforced and managed by the project manager of each construction project in conjunction with our own certified inspector. If the requirements are not met, we impose corrective actions in order to bring the project back into compliance. Failure to comply with the contract requirements results in a breach of contract and is dealt with according to contract law.	
IV.B.5.b.12	Use the space below to describe activities and actions taken to identify existing stormwater structural BMPs discharging to the MS4 with a goal of ensuring long term O&M of the BMPs.
A list of BMPs was formulated in the Drainage Master Plan of 2006. In 2008, the list of BMPs was updated to include new BMPs installed after 2006. The procedure to add new BMPs and delete the BMP’s removed during new construction is an annual task for the Utilities Office. The Utilities Office updates the maintenance requirements for each new BMP. Each year the University evaluates and updates this list as new work is completed on campus. For 2022, the total number of BMPs remained at 123. This number likely will be adjusted for 2023 as URI corrects for the classification of certain outfalls as BMPs as discussed elsewhere in this report.	

Additional Measurable Goals and Activities

SECTION II.A. - Plan and SWPPP/SWMP Reviews during Year 19 (2022), Part IV.B.5.b.4: Review 100% of post-construction BMPs for the control of stormwater runoff from new development and redevelopment projects that result in discharges to the MS4 which incorporates consideration of potential water quality impacts (the program requires reviewing 100% of plans for development projects greater than 1 acre, not reviewed by other State programs). Plan reviews must be conducted by adequately trained personnel.

# of Post-Construction Applications Received: 0 # of Post-Construction Reviews Completed: 0 # of Permits/Authorizations Issued: 0
Summary of Reviews and Findings, include an evaluation of the effectiveness of the program. No permitted projects were completed in 2022. Identify person(s) /Department and/or parties responsible for the implementation of this requirement: Identify the type and date of training this person(s)/parties has/have received to be considered "adequately trained":

SECTION II.B. - Post Construction Inspections during Year 19 (2022), Parts IV.G.2.o and IV.B.5.b.10 - Proper Installation of Structural BMPs: Inspection of BMPs, to ensure these are constructed in accordance with the approved plans (the program must include inspection of 100% of all development greater than one acre within the regulated areas that result in discharges to the MS4 regardless of whom performs the review). Inspections must be conducted by adequately trained personnel.

# of Active Construction Projects: 1	# of Construction Projects Completed: 0
# of Site Inspections for proper Installation of BMPs: 0	# of Complaints Received: 0
# of Violations Issued: 0	# of Unresolved Violations Referred to RIDEM: 0
Summary of Enforcement Actions: No enforcement actions were undertaken in 2022. Identify person(s) /Department and/or parties responsible for the implementation of this requirement: Angela Harvey – Manager, Utilities and Environmental Compliance, Utilities Department Ken Burke – Assistant Director of Capital Projects Identify the type and date of training this person(s)/parties has/have received to be considered "adequately trained": Angela Harvey – BS Civil Engineering 2007 URI, MS Civil & Environmental Engineering 2010 URI; USEPA Construction Inspection Training Course Ken Burke –Rhode Island registered Professional Engineer	

SECTION II.C. - Post Construction Inspections during Year 19 (2022), Parts IV.G.2.p and IV.B.5.b.11 - Proper Operation and Maintenance of Structural BMPs: Describe activities and actions taken to track required Operations and Maintenance (O&M) actions for site inspections and enforcement of the O&M of structural BMPs. Tracking of required O&M actions for site inspections and enforcement of the O&M of structural BMPs.

# of Site Inspections for proper O&M of BMPs: 0	# of Complaints Received: 0
# of Violations Issued: 0	# of Unresolved Violations Referred to RIDEM: 0

Summary of Activities and Enforcement Actions. Evaluate the effectiveness of the Program in minimizing water quality impacts.

No new BMPs went into operation in 2022. All existing BMPs are inspected annually to ensure proper maintenance and operation.

Identify person(s) /Department and/or parties responsible for the implementation of this requirement:
Angela Harvey – Manager, Utilities and Environmental Compliance, Utilities Department

Identify the type and date of training this person(s)/parties has/have received to be considered "adequately trained":
Angela Harvey – BS Civil Engineering 2007 URI, MS Civil & Environmental Engineering 2010 URI

Strategies for requiring the use of non-structural Low Impact Development (LID) site design practices and techniques into stormwater management designs for new and redevelopment projects, check all that apply in your municipality/MS4:

☐ None
☐ Ordinances or by-laws requiring LID standards (e.g. reduced road widths, % conservation land, etc.)
☐ Ordinances or by-laws requiring LID design at conceptual review (i.e., Pre-application and/or Master Plan) stages for municipal review prior to plans being engineered.
☐ Ordinances or by-laws requiring LID standards only in impaired waterbody drainage areas
☐ Local development regulations requiring use of LID to the maximum extent practicable
☐ LID Guidance available in written form
☐ LID Guidance available at pre-application meetings
☒ Other strategies to ensure incorporation of LID to the maximum extent practicable, describe:

For internal projects, LID is a standard of the URI Office of Capital Planning. This is an effective strategy given that URI owns all BMPs associated with the University's MS4 system.

Person(s)/Department responsible for reviewing submissions for LID:

Generally, the URI Capital Projects Group is the department responsible for reviewing submissions for LID.

Person(s)/Department/Board responsible for approving submissions for LID at Preliminary and/or Final Review, if applicable:

Ken Burke – Assistant Director of Capital Projects

Are you aware of the Municipal LID Self-Assessment that was introduced by the DEM and RI NEMO in 2019 and finalized and distributed in March 2020?

☒ Yes ☐ No

A final version of the Municipal LID Self-Assessment is available on the DEM's website:
http://www.dem.ri.gov/programs/benviron/water/permits/ripdes/stwater/t4guide/lid-checklist-primer.pdf

Additional guidance is also available:

http://www.dem.ri.gov/programs/benviron/water/permits/ripdes/stwater/t4guide/lid-assessment-fs.pdf

http://www.dem.ri.gov/programs/benviron/water/permits/ripdes/stwater/pdfs/lidfactsheet.pdf

http://www.dem.ri.gov/programs/benviron/water/permits/ripdes/stwater/t4guide/lidplan.pdf

Did your community complete the Municipal LID Self-Assessment? ☐ Yes ☒ No

If yes and it was completed in 2022, please provide a copy as an attachment to this Annual Report, if you have not already submitted it.

If no, does your community plan to complete it?

☐ Yes ☒ No

If No, why not? As described above, the University has adopted LID practices for internal projects. Further, URI requires new major buildings on campus to meet LEED requirements for stormwater management. In summary, our current practices already incorporate practices geared toward low-impact development.

Strategies being implemented to ensure long-term Operation and Maintenance (O&M) of privately-owned structural stormwater BMPs, check all that apply in your municipality/MS4:

☐ None
☐ Ordinances or by-laws identify BMP inspection responsible party
☐ Ordinances or by-laws identify BMP maintenance responsible party
☐ Ordinances or by-laws identify BMP inspections and maintenance requirements
☐ Ordinances or by-laws provide for easements or covenants for inspections and maintenance
☐ Ordinances or by-laws require for every constructed BMP an inspections and maintenance agreement
☐ Ordinances or by-laws contain requirements for documenting and detailing inspections
☐ Ordinances or by-laws contain requirements for documenting and detailing maintenance
☐ Ordinances or by-laws contain authority to enforce for lack of maintenance or BMP failure
☐ The MS4 is responsible for inspections of all privately-owned BMPs
☐ The MS4 is responsible for maintenance of all privately-owned BMPs
☐ Establishment of escrow account for use in case of failure of BMP
☐ Other strategies to ensure long-term O&M of privately-owned BMPs, describe:
☒ The University does not have any privately owned BMP's. All BMP's are MS4-owned BMP's. As such, the sections below are N/A.

Does your municipality/MS4 require the use BMPs Operations and Maintenance Agreements? ☐ YES ☐ NO

If YES, please indicate if the Operations and Maintenance Agreements include the following:

a. Party responsible for the long-term O&M of permanent stormwater management BMPs	☐ YES ☐ NO
b. A description of the permanent stormwater BMPs that will be operated and maintained	☐ YES ☐ NO
c. The location of the permanent stormwater BMPs that will be operated and maintained	☐ YES ☐ NO
d. A timeframe for routine and emergency inspections and maintenance of all permanent stormwater management BMPs	☐ YES ☐ NO
e. A requirement that all inspections and maintenance activities are documented	☐ YES ☐ NO
f. Annual submission of inspection/maintenance certification/documentation to the MS4	☐ YES ☐ NO
g. Stormwater management easement for access for inspections and maintenance or the preservation of stormwater runoff conveyance, infiltration, and detention areas and other stormwater controls and BMPs by persons other than the property owner	☐ YES ☐ NO
h. Steps available for addressing a failure to maintain the stormwater controls and BMPs	☐ YES ☐ NO

Please elaborate, if appropriate:

_____

_____

Does your municipality/MS4 keep an inventory of privately-owned BMPs?	☐ YES ☐ NO

<u>For privately-owned structural BMPs</u>, does your municipality/MS4 have a system for tracking:

a. Agreements and arrangements to ensure O&M of BMPs?	☐ YES ☐ NO
b. Inspections?	☐ YES ☐ NO
c. Maintenance and schedules?	☐ YES ☐ NO
d. Complaints?	☐ YES ☐ NO
e. Non-Compliance?	☐ YES ☐ NO
f. Enforcement actions?	☐ YES ☐ NO

Do you use an electronic tool (e.g. GIS, database, spreadsheet) to track post-construction BMPs, inspections, and maintenance? ☒ YES ☐ NO

If yes, please elaborate on which tools are used:
BMP maintenance is tracked by URI Lands & Grounds with Excel spreadsheet and/or by the Utillities Office using GIS.

NOTE: BMP maintenance tasks can be a great way to involve and educate the community to their purpose and function. BMPs have the potential to create a highly interactive environment for community members and volunteers to get involved.

.

MINIMUM CONTROL MEASURE #6:
POLLUTION PREVENTION AND GOOD HOUSEKEEPING IN MUNICIPAL OPERATIONS
(Part IV.B.6 General Permit)

SECTION I. OVERALL EVALUATION:

GENERAL SUMMARY, STATUS, APPROPRIATENESS AND EFFECTIVENESS OF MEASURABLE GOALS:

Include information relevant to the implementation of each measurable goal, such as activities and practices used to address on-going requirements, and personnel responsible. Discuss activities to be carried out during the next reporting cycle. If addressing TMDL requirements, please indicate rationale for the activities chosen to address the pollutant of concern.

(Note: Identify parties responsible for achieving the measurable goals and reference any reliance on another entity for achieving measurable goals. Mark with an asterisk (*) if this person/entity is different from last year.)

Responsible Party Contact Name & Title: Angela Harvey

Responsible Party Contact Name & Title: Angela Harvey -- Manager, Utilities and Environmental Compliance

Phone: 401-874-2448 **Email:** alharvey@uri.edu

IV.B.6.b.1.i	Use the space below to describe activities and actions taken to identify structural BMPs (these include but are not limited to: retention/detention basins, vegetated treatment, infiltration and pre-treatment controls, etc.) owned or operated by the small MS4 operator (the program must include identification and listing of the specific location and a description of all structural BMPs in the SWMPP and update the information in the Annual Report). Evaluate appropriateness and effectiveness of this requirement. **Do you have an inventory of MS4-owned/operated BMPs?** ☒ YES ☐ NO **Total # of MS4-owned/operated BMPs** (does not include CBs or MHs): 123

The University updates its BMP inventory list annually, with BMPs added or removed as a result of new construction activity directed through the Office of Capital Projects, Office of Small Projects, and Lands and Grounds. GIS mapping is updated to show the locations of BMPs as they are added or removed from the inventory list. The Utilities Offices uses the list in conjunction with the mapping to conduct annual inspections and identify the locations of features requiring maintenance and repair.

IV.B.6.b.1.ii	Use the space below to describe activities and actions taken for inspections, cleaning and repair of detention/retention basins, storm sewers and catch basins with appropriate scheduling given intensity and type of use in the catchment area. Evaluate appropriateness and effectiveness of this requirement. **# of MS4-owned/operated BMPs inspected in 2022**: 123 **# of MS4-owned/operated BMPs maintained/cleaned in 2022**: 5[1] **# of MS4-owned/operated BMPs repaired in 2022**: 2 Does your municipality/MS4 have a system for tracking: a. Inspection schedules of MS4-owned BMPs? ☒ YES ☐ NO b. Maintenance/cleaning schedules of MS4-owned BMPs? ☒ YES ☐ NO c. Repairs, corrective actions needed? ☒ YES ☐ NO d. Complaints? ☒ YES ☐ NO Do you use an electronic tool (e.g. GIS, database, spreadsheet) to track stormwater BMPs, inspections, and maintenance? ☒ YES ☐ NO

The following BMPs underwent repair in 2022:
*West Alumni/White Horn Brook culvert, rip rap on the east side of the culvert.
*Inlet to CBLS rain garden (section of pipe thickly clogged with bamboo roots, prohibiting flow of stormwater)

[1]Routine maintenance includes the mowing of certain vegetated basins and removal of trash when present. The number shown is based on the mowing of certain areas requested by the Utilities Office to allow for access to certain BMPs. This number does not include routine mowing of basins completed by the Lands and Grounds Dept.

IV.B.6.b.1.iii	Use the space below to describe activities and actions taken to support the requirement of yearly inspection and cleaning of all catch basins (a lesser frequency of inspection based on at least two consecutive years of operational data indicating the system does not require annual cleaning might be acceptable). Evaluate appropriateness and effectiveness of this requirement. **Total # of CBs within regulated area (including SRPW and TMDL areas):** 840[1] **# of CBs inspected in 2022:** 815 **% of Total inspected:** 97% **# of CBs cleaned in 2022:** 227 **% of Total cleaned:** 27 If determined, approximate quantity of sand/debris collected by cleaning of catch basins: 38.18 tons Location used for the disposal of debris:__RIRRC_____ Do you use an electronic tool (e.g. GIS, database, spreadsheet) to track the inspections and cleaning of catch basins? ☒ YES ☐ NO

The University uses a catch basin inventory spreadsheet to record inspection and cleanings on drainage structures. Generally, the catch basins along all roads are cleaned yearly due mainly to the quantity of leaves and sediments that flow into the basins. Basins located in turf areas are also inspected annually but cleaned on an as-needed basis. Basins in turf areas are usually cleaned at longer intervals because they accumulate less debris and truck access in the area damages the property.

[1]The total number of catch basins within the regulated area has been adjusted down from the 2021 count based on reevaluation of mapped features, including the elimination of CBs that have been eliminated by construction or were not found in the field, and those features that are not actual catch basins (e.g. roof drains, scuppers, manholes, etc.). Features such as roof drains and scuppers are tracked separately.

IV.B.6.b.1.iv	Use the space below to describe activities and actions taken to minimize erosion of road shoulders and roadside ditches by requiring stabilization of those areas. Evaluate appropriateness and effectiveness of this requirement.

Most roadways throughout campus have curbs to minimize erosion. Swales and ditches are also used to limit erosion of roadside shoulders. Areas that have been disturbed by winter activities are repaired and seeded in the spring.

IV.B.6.b.1.v	Use the space below to describe activities and actions taken to identify and report known discharges causing scouring at outfall pipes or outfalls with excessive sedimentation, for the Department to determine on a case-by-case basis if the scouring or sedimentation is a significant and continuous source of sediments. Evaluate appropriateness and effectiveness of this requirement.

During the annual inspection of outfalls, the outfalls are inspected for scouring and excessive sedimentation. Areas that need repair are reported to the URI Control Center and a work order is generated.
Erosion was identified at the locations listed in Section II.B below.

IV.B.6.b.1.vi	Use the space below to indicate if all streets and roads within the urbanized area were swept annually and if not indicate reason(s). The operator is required to sweep all streets and roads within the regulated area annually unless a lesser frequency can be justified based on at least two consecutive years of data indicating the street or road does not require annual sweeping. Evaluate appropriateness and effectiveness of this requirement. **Total roadway miles within regulated area (including SRPW and TMDL areas):** 7 **Roadway miles that were swept in 2022:** 7 **% of Total swept:** 100 Type of sweeper used: ☒ Rotary brush street sweeper ☐ Vacuum street sweeper If determined, approximate quantity of sand/debris collected by sweeping of streets and roads: 12 cy Location used for the disposal of debris: Removed from URI property by contractor Do you use an electronic tool (e.g. GIS, database, spreadsheet) to track the annual sweeping of streets and roads? ☐ YES ☒ NO
All roadways and most parking lots are swept each spring to remove sand and sediment. The only parking lots that are not swept are the porous pavement parking lots which are vacuumed. Additional sweeping of roads also occurs just prior to commencement activities in May as well as when needed throughout the year. The work is required not only for runoff concerns but as well as safety issues with bicycles and other modes of transport across campus and for general aesthetics. In the summer the gutters along the campus roads are vacuumed monthly to remove accumulated debris. In the fall the gutters along the roads are vacuumed weekly (October & November) to remove accumulated leaves and debris. The sweeping of the roads is performed by outside contractors under the direction of the Lands and Grounds Dept. The University uses only a limited amount of sand during the winter months. The URI Lands and Grounds Dept. is responsible for vacuuming the gutters.	
IV.B.6.b.1.vii	Use the space below to describe activities and actions taken for controls to reduce floatables and other pollutants from the MS4. Evaluate the appropriateness and effectiveness of this requirement.
The URI Lands and Grounds Dept. and Utilities Office are responsible for this activity. Floatables and other trash is removed on a regular basis from waterways and adjacent areas. The volume of floatables and other trash associated with waterways and adjacent areas are not tracked separately from trash and recyclables collected across campus in receptacles. Trash and recyclable materials are collected at the University's transfer station and then trucked off campus.	
IV.B.6.b.1.viii	Use the space below to describe the method for disposal of waste removed from MS4s and waste from other municipal operations, including accumulated sediments, floatables and other debris and methods for record-keeping and tracking of this information. Do you have a system for tracking actions to remove and dispose of waste? ☒ YES ☐ NO
Sediments removed from drainage structures were disposed of offsite in 2022 (total 38.18 tons). The Utilities Office is responsible for this activity. Sediments from street sweepings were disposed of off-site by the contractor and were estimated to be 12 cy. Floatables and trash are removed on a regular basis from waterways and adjacent areas and are trucked off campus. The volume is not recorded separately from general trash and materials collected across campus. The URI Lands and Grounds Dept. is responsible for these activities.	

IV.B.6.b.2	Use the space below to describe any operations under the MS4's legal control, including activities and facilities, that have the potential to introduce pollutants into stormwater runoff, such as pesticide/herbicide/fertilizer application, chemical and waste handling and storage, vehicle fueling, vehicle washing, vehicle maintenance, sand/salt storage, snow disposal, facilities such as public works facilities with maintenance and storage yards, waste transfer stations, municipal wastewater and water treatment facilities, and municipal parking owned and operated by the MS4. Does your MS4 have any salt piles, or piles containing salt, used for deicing? ☒ YES ☐ NO If yes: Are these piles covered to prevent exposure to rain, snow, snowmelt and/or runoff? ☒ YES ☐ NO If yes, check the type of cover used: ☒ Weatherproof permanent structure/shelter ☐ A temporary, secured, durable, waterproof covering (e.g., tarpaulin, polyethylene, polyurethane) Are these piles located on impermeable surfaces? ☒ YES ☐ NO
The University uses magnesium chloride for the treatment of permeable and concrete surfaces. Road salt is used to treat impervious asphalt surfaces. Best management practices are used to ensure proper application of both treatments. In addition to the above, best management practices are employed for all of the following: pesticide/herbicide/fertilizer application, chemical and waste handling and storage, vehicle fueling, vehicle washing, vehicle maintenance, snow disposal, maintenance and storage yards, waste transfer stations, water treatment facilities, and parking owned and operated by the University.	
IV.B.6.b.5	For all facilities with discharges of stormwater associated with industrial activity, use the space below to describe and indicate activities and corrective actions for the evaluation of compliance. This evaluation must include visual quarterly monitoring; routine visual inspections of designated equipment, processes, and material handling areas for evidence of, or the potential for, pollutants entering the drainage system or point source discharges to waters of the State; and inspection of the entire facility at least once a year for evidence of pollution, evaluation of BMPs that have been implemented, and inspection of equipment. A Compliance Evaluation report summarizing the scope of the inspection, personnel making the inspection, major observations related to the implementation of the Stormwater Management Plan (formerly known as a Stormwater Pollution Prevention Plan), and any actions taken to amend the Plan must be kept for record-keeping purposes.
The URI Utilities Office conducted quarterly monitoring and routine inspections of the URI Facilities Areas in 2022. A full inspection of the Facilities Operations area of the campus was also performed and is documented in the evaluation report. URI has a SPCC Plan in place, which was updated in 2022. This Facilities Area is monitored on a regular basis and routine walk-throughs of storage areas occur at least once a month. If any issues are noted a work order is generated.	

IV.B.6.b.6	Use the space below to describe all employee training programs used to prevent and reduce stormwater pollution from activities such as park and open space maintenance, fleet and building maintenance, new construction and land disturbances, and stormwater system maintenance for the past calendar year, including staff municipal participation in trainings offered by other parties (e.g. SNEP, EPA) and all in-house training conducted by municipality. Evaluate appropriateness and effectiveness of this requirement. How many stormwater management trainings have been provided to *municipal employees* during this reporting period? Three sessions, in conjunction with SPCC training, offered jointly by EH&S and Utilities Office What was the date of the training? November 14, 2022 (three sessions) Training Topic(s): SPCC training, including stormwater component How many *municipal employees* attended this training? 24 What was the date of the training? Fall 2022 (online training over several days) Training Topic(s): Construction Inspection Training Course for CGP Operators How many *municipal employees* attended this training? 1 What percent of *municipal employees* in relevant positions and departments received stormwater management training? 75% (estimated percent of employees representing various Facilities and Public Safety units) Have *municipal employees* that are responsible for inspecting or cleaning catch basins also been trained to detect and report illicit connections or non-stormwater discharges? ☒ YES ☐ NO
In addition to the above, in February and March each year the Lands & Grounds Department sends its crews to the annual green industry conference and seminars. This allows the Lands & Grounds crews to earn certification and knowledge credits toward their various licenses. Topics covered include IPM strategies and best practices for maintaining landscapes efficiently with minimal environmental impacts. The trainings and course offerings differ each year, with topics ranging from strategies to protect stormwater to general environmental protection.	
IV.B.6.b.7	Use the space below to describe actions taken to ensure that new flow management projects undertaken by the operator are assessed for potential water quality impacts and existing projects are assessed for incorporation of additional water quality protection devices or practices. Evaluate appropriateness and effectiveness of this requirement.
RIDEM permitting is required for all new flow management projects to assess water quality impacts. The University encourages infiltration and groundwater recharge utilization in new projects and re-developments in addition to complying with regulatory standards. In addition to the large-scale permitted projects, the University has been installing a number of small detention/infiltration basins, grass swales and berms to capture storm water flow. These small projects significantly reduce the amount of erosion and sedimentation issues downstream. The University requires that new and redevelopment projects apply effective BMPs that control flow, erosion, and water quality impacts. New major projects have the goal of meeting LEED certification which includes sustainable management of water resources and pollution control	
Additional Measurable Goals and Activities	

SECTION II.A - Structural BMPs (Part IV.B.6.b.1.i) These include but are not limited to: retention/detention basins, vegetated treatment, infiltration, and pre-treatment controls, etc.

BMP ID:	Location:	Name of BMP Owner/Operator:	Description of BMP:	Frequency of Inspection:
BMP-01	Northwest of Independence Square and south of the Intramural athletic	URI	Level Spreader	Annually
BMP-02	Ballentine Hall Detention Pond, north of Ballentine Hall	URI	Detention Pond	Annually
BMP-03	Butterfield Rd Sedimentation box; North of Hope Dining Hall	URI	Sedimentation Box	Annually
BMP-04	CBLS Rain Garden	URI	Rain Garden	Annually
BMP-05	North of CHI PHI Fraternity House, NW of Weldin Hall	URI	Detention structure, Stormceptor	Annually
BMP-16	Dairy Barn Parking Lot; North of Meade Stadium	URI	Pervious Parking Surface	Annually

SECTION II.B - Discharges Causing Scouring or Excessive Sedimentation (Part IV.B.6.b.1.v)

Outfall ID:	Location:	Description of Problem:	Description of Remediation Taken, include dates:	Receiving Water Body Name/Description:
URI-031	U-Village Bldg 1	Sedimentation	Sediment to be removed spring 2023	White Horn Brook
URI-033	U-Village Bldg 5	Sedimentation	Sediment to be removed spring 2023	White Horn Brook

SECTION II.C - Note any planned municipal construction projects/opportunities to incorporate water quality BMPs, low impact development, or activities to promote infiltration and recharge (Part IV.G.2.j).

SECTION II.D - Please include a summary of results of any other information that has been collected and analyzed. This includes any type of data (Part IV.G.2.e).

TOTAL MAXIMUM DAILY LOAD (TMDL) or other Water Quality Determination REQUIREMENTS

SECTION I. If you have been notified that discharges from your MS4 require non-structural or structural stormwater controls based on an approved TMDL or other water quality determination, please provide an assessment of the progress towards meeting the requirements for the control of stormwater identified in the approved TMDL (Part IV.G.2.d). Please indicate rationale for the activities chosen to address the pollutant of concern.

(Note: Identify parties responsible for achieving the measurable goals and reference any reliance on another entity for achieving measurable goals. Mark with an asterisk (*) if this person/entity is different from last year.)

Responsible Party Contact Name & Title: _____

Phone: _____ **Email:** _____

LIST OF IMPAIRED WATERS:			
Impaired Water Body: WBID:	Pollutants Causing Impairments:	Has TMDL been completed? Has MS4 been notified of TMDL requirements? Has MS4 developed a Scope of Work or TMDL Implementation Plan?	☐ YES ☐ NO ☐ YES ☐ NO ☐ YES ☐ NO
Impaired Water Body: WBID:	Pollutants Causing Impairments:	Has TMDL been completed? Has MS4 been notified of TMDL requirements? Has MS4 developed a Scope of Work or TMDL Implementation Plan?	☐ YES ☐ NO ☐ YES ☐ NO ☐ YES ☐ NO
[add as necessary]			

What kind of public education and outreach strategy does the MS4 implement to target each pollutant of concern? (e.g., signage on installed stormwater controls, resources on website, pamphlets about litter, pet waste, grass clippings, fertilizer use, etc.)

Pollutant of Concern:	Strategy:	Target Audience:

Has the MS4 installed stormwater BMPs or required the installation of stormwater BMPs on private property to address impairments? ☐ YES ☐ NO

If yes, indicate the name of the impaired water body associated with the stormwater control, type of stormwater control, date installed, ownership, and who is responsible for maintenance:

Impaired water body	Type of Stormwater Control:	Date Installed:	☐ Municipally Owned ☐ Privately Owned	Who maintains it?
[add as necessary]				

TOTAL MAXIMUM DAILY LOAD (TMDL) OR OTHER WATER QUALITY DETERMINATION REQUIREMENTS cont'd

Additional enhanced minimum measures used to address water quality issues (e.g., increased street sweeping or catch basin cleaning in areas with high pollutant loading, installation of floatable traps/screens, etc.):

SPECIAL RESOURCE PROTECTION WATERS (SRPWs)

SECTION I. In accordance with Title 250 RICR-150-10-1 ("RIPDES Regulations") §1.32(A)(5)(a)(7), on or after March 10, 2008, any discharge from a small municipal separate storm sewer system to any Special Resource Protection Waters (SRPWs) or impaired water bodies within its jurisdiction must obtain permits if a waiver has not been granted in accordance with RIPDES Regulations §1.32(G)(5)(c). A list of SRPWs can be found in Title 250-RICR-150-05-1 ("Water Quality Regulations") §1.28 at this link:
https://rules.sos.ri.gov/regulations/part/250-150-05-1
The State of Rhode Island 2018-2020 303(d) Impaired Waters Report can be found here:
http://www.dem.ri.gov/programs/benviron/water/quality/pdf/iwr1820.pdf

If you have discharges from your MS4 (regardless of its location) to any of the listed SRPWs or impaired waters (including impaired waters when a TMDL has not been approved), please provide an assessment of the progress towards expanding the MS4 Phase II Stormwater Program to include the discharges to the aforementioned waters and adapting the Six Minimum Control Measures to include the control of stormwater in these areas. Please indicate a rationale for the activities chosen to protect these waters. Please note that all of the measurable goals and BMPs required by the 2003 MS4 General Permit may not be applicable to these discharges.

RHODE ISLAND DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

Office of Water Resources

INSTRUCTIONS FOR THE RI POLLUTANT DISCHARGE ELIMINATION SYSTEM (RIPDES)
SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEMS AND INDUSTRIAL ACTIVITY AT ELIGIBLE FACILITIES OPERATED BY REGULATED SMALL MS4s
ANNUAL REPORT FORM

WHO MUST SUBMIT AN ANNUAL REPORT:

Owners/Operators of regulated small municipal separate storm sewer systems (MS4s) and industrial activities authorized to discharge stormwater under the Rhode Island Pollutant Discharge Elimination System (RIPDES) Stormwater General Permit for Small Municipal Separate Storm Sewer Systems and Industrial Activity at Eligible Facilities Operated by Regulated Small MS4s (hereafter referred to as "the General Permit"), must submit an Annual Report, outlined in Part IV.G of the permit. The Report must be submitted each year after permit issuance **by March 10th** to track progress of compliance. If you have questions regarding this Annual Report Form contact Jennifer Stout of the Rhode Island Department of Environmental Management (RIDEM), Office of Water Resources, Permitting Section at (401) 222-4700 ext. 2777726.

The Annual Report must be submitted to:

RIDEM Office of Water Resources
RIPDES Permitting Program
235 Promenade Street
Providence, RI 02908
ATTN: Jennifer Stout

INSTRUCTIONS FOR COMPLETION:

GENERAL INFORMATION PAGE:

"RIPDES Permit #"
Include your permit ID # to ensure proper tracking.

"Operator of MS4"
Give the legal name of the person, firm, public (municipal) organization, or any other entity that is responsible for day-to-day operations of the MS4 described in this application (as defined in Title 250 RICR-150-10-1 ("RIPDES Regulations") §§1.3 and 1.12). Enter the complete address and telephone number of the operator. Circle the appropriate choice to indicate the legal status of the operator of the MS4.

"Owner of MS4"
If the owner is the same as the operator do not complete this section. Give the legal name of the person, firm, public (municipal) organization, or any other entity that owns the MS4 described in this application (RIPDES Regulations §§1.3 and 1.12). Do not use a colloquial name. Enter the complete address and telephone number of the owner.

"Certification"
State and federal statutes provide for severe penalties for submitting false information on this application form. State and federal regulations require this application to be signed as follows (RIPDES Regulations §1.12);

For a corporation: by a responsible corporate officer, which means: (i) president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision making functions, or (ii) the manager of one or more manufacturing, production, or operating facilities, provided the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information or permit application requirements; and where authority to sign documentation has been assigned or delegated to the manager in accordance with corporate procedures;

For a partnership or sole proprietorship: by a general partner or the proprietor;

For a Municipality, State, Federal or other public site: by either a principal executive officer or ranking elected official.

SECTION I- OVERALL EVALUATION OF BMPS AND MEASURABLE GOALS:

One or more pages, front and back, are provided to report on the status of measurable goals which have been developed to aid in the implementation of strategies, procedures, and programs used to achieve each of the six minimum control measures in Part IV.B of the General Permit. This section provides narrative space for a descriptive explanation and evaluation of the actions taken to satisfy each of the minimum control measures for the 2022 calendar year. Please type or print. If additional space is needed, modify as necessary. Please submit attachments to the appropriate minimum control measure following the format provided.
A Permit ID # has been provided, which refers to the part of the permit where you can find a listing or description of the required measurable goal.

Please provide a general summary of actions taken (implementation of BMPs, development of procedures, events, etc.) to meet the measurable goals of the minimum measure. **Be sure to identify parties responsible for achieving each measurable goal** and reference any reliance on another entity for achieving any measurable goal. Mark with an asterisk (*) if this person/entity is different from last year.

Describe whether each measurable goal was completed within the time proposed in the General Permit or your Stormwater Management Program Plan (SWMPP). Why or why not? Provide a progress report and discussion of activities that will be carried out during the next reporting cycle to satisfy the requirements of the minimum measures. If applicable, assess the appropriateness of the actions taken to meet the requirements of the minimum measure. In determining appropriateness, you may want to consider at a minimum the local population targeted, pollution sources addressed, receiving water concerns, integration with local management procedures, and available resources and violations or environmental impacts eliminated or minimized.

Also, discuss the effectiveness of the implementation of BMPs to meet the requirements of the minimum measure and the overall effectiveness of the minimum measure. Describe your progress towards achieving the overall goal of reducing the discharge of pollutants. Please include assessment parameters/indicators used to measure the success of the minimum measure. Also include a discussion of any proposed changes to BMPs or measurable goals.

After evaluation, it may be necessary to make changes or modifications to your Implementation Schedule if the time frame, appropriateness or effectiveness cannot be assured. If so, please include descriptions of changes or modifications, and detailed justification in the appropriate sections.

SECTION II- ADDITIONAL ANNUAL REPORT REQUIREMENTS

Section II refers to additional reporting requirements that the General Permit requires to be submitted to the Department as part of the Annual Report. Section II requirements apply to Minimum Control Measures 2 through 6.

Minimum Control Measure #2: Section II:
Specify the date of and how the annual report was public noticed. If a public meeting was needed, provide the date and place. Include a summary of public comments received in the public comment period of the draft annual report and planned responses or changes to the program (new or revised BMP's and measurable goals, partnerships, etc.). Be sure to attach a copy of your public notice (Parts IV.G.2.h and IV.G.2.i) to the Annual Report.

Minimum Control Measure #3: Section II.A:
Provide the number of illicit discharges identified in 2022, number of illicit discharges tracked in 2022, number of illicit discharges eliminated in 2022, complaints received, complaints investigated, violations issued and resolved with a summary of enforcement actions, number of unresolved violations that have been referred to RIDEM, the total number of illicit discharges identified to date, and the total number of illicit discharges remaining unresolved at the end of 2022. Include a short narrative describing the extent to which your system has been mapped (Part IV.G.2.m), and the total number of outfalls identified to date.

Minimum Control Measure #3: Section II.B:
List identified MS4 interconnections, including location, date found, operator of the physically interconnected MS4, and originating source of newly identified physical interconnections with other small MS4s. Also note any planned or coordinated activities with the physically interconnected MS4 (Part IV.G.2.k and IV.G.2.l).

Minimum Control Measures #4 & 5: Section II.A:
Identify the number of construction and post-construction plan and SWPPP/SESC Plan reviews completed during Year 19 (2022) and any additional information. This includes, but is not limited to a summary of the reviews, responsible parties, and types of projects reviewed.

Minimum Control Measure #4: Section II.B:
Construction inspection information for erosion and sediment control should be submitted annually as stated in Part IV.G.2.n. Provide a summary of the number of site inspections conducted, inspections that have resulted in enforcement actions, violations that have been resolved and of those unresolved, referred to RIDEM.

Minimum Control Measure #5: Section II.B:
Post-construction inspection information for proper installation of post-construction structural BMPs should be submitted annually as stated in Part IV.G.2.o. This should provide a summary of the number of site inspections conducted, inspections that have resulted in enforcement actions, violations that have been resolved and of those unresolved, referred to RIDEM.

Minimum Control Measure #5: Section II.C:
Inspection information for proper operation and maintenance of post-construction structural BMPs should be submitted annually as stated in Part IV.G.2.p. This should provide a summary of the number of site inspections conducted, inspections that have resulted in enforcement actions, violations that have been resolved and of those unresolved, referred to RIDEM.

Minimum Control Measure #6: Section II.A:

As prescribed in Part IV.B.6.b.1.i of the General Permit, the MS4 operator must identify and list the specific location and description of all structural BMPs in the SWMPP at the time of application and update the information in the annual report.

Minimum Control Measure #6: Section II.B:
Part IV.B.6.b.1.v of the General Permit states to identify and report annually, as part of the annual report, known discharges causing scouring at outfall pipes or outfalls with excessive sedimentation. Include Outfall ID #, location, description of the problem, any remediation taken, and the ultimate receiving water body.

Minimum Control Measure #6: Section II.C:
As noted in Part IV.G.2.j of the General Permit, specify any planned municipal construction projects or opportunities to include water quality BMPs, low impact development, or seek to promote infiltration and recharge.

Minimum Control Measure #6: Section II.D:
Please include a summary of results of any other information that has been collected and analyzed. This includes any type of data, including, but not limited to, dry weather survey data (Part IV.G.2.e).

TOTAL MAXIMUM DAILY LOAD (TMDL) or other Water Quality Determination REQUIREMENTS

Section I:
Complete this section only if your MS4 is subject to an approved TMDL. TMDL requirements may require the implementation of the six minimum control measures to address the pollutants of concern, and/or additional structural stormwater controls or measures that are necessary to meet the provisions of the approved TMDL. Be sure to identify the approved TMDL and assess the progress towards meeting the requirements for the control of stormwater (Part IV.G.2.d).

Provide a progress report on the present status and discussion of activities that have been accomplished or will be carried out during the next reporting cycle to satisfy the requirements of the TMDL. If applicable, assess the appropriateness of the BMPs selected under each of the six minimum control measures to meet the requirements of the TMDL. In determining appropriateness, you may want to consider violations or environmental impacts eliminated or minimized.

Please include assessment parameters/indicators that will be used to measure the success of the selected BMPs. Also include a discussion of any proposed changes to BMPs or measurable goals.

SPECIAL RESOURCE PROTECTION WATERS (SRPWs)

Section I:
Complete this section only if your MS4, located outside Urbanized Areas or Densely Populated Areas, discharges to:
a SRPW as listed in §1.28 of Title 250-RICR-150-05-1 ("Water Quality Regulations") at this link:
https://rules.sos.ri.gov/regulations/part/250-150-05-1
or
an impaired water body including water bodies with no approved TMDL as listed in the *State of Rhode Island 2018-2020 303(d) Impaired Waters Report (February 2021)* at this link:
http://www.dem.ri.gov/programs/benviron/water/quality/pdf/iwr1820.pdf

In accordance with the RIPDES Regulations §1.32(A)(5)(a)(7), MS4s were required to incorporate any discharges to these waterbodies into their MS4 Program on or after March 10, 2008 unless a waiver has been granted in accordance with RIPDES Regulations §1.32(G)(5)(c).

Provide a progress report on the present status and discussion of activities that have been accomplished or will be carried out during the next reporting cycle to incorporate these areas into the MS4's Phase II Stormwater Program.

Comprehensive Site Compliance Evaluation

Public Works Facility
Comprehensive Site Compliance Evaluation

Facility Name:	**University of Rhode Island – Facilities Dept.**
Facility Address:	**60 Tootell Road Kingston, RI 02881**
Observations by:	**Angela Harvey**
Date:	**October 14, 2022**

Vehicle/equipment (including mowers, small engines)		
Activity and/or BMP Indicate if BMP is working or if action is required. Indicate required actions under "Recommendations/Actions Taken".	**Working**	**Action Required**
a. Fueling:		
i. Designated fueling area has an overhanging roof	**X**	1
ii. Materials to absorb spills stored near fueling location	**X**	
iii. Stormwater is directed away from fueling area / no water runs though fueling area during storms	**X**	
iv. Only trained staff fuels/cleans up any spills	**X**	
1. Work continues on construction of new vehicle fueling area on the west side of Tootell Road. All relevant fuel-handling and runoff requirements will be addressed in the new facility, scheduled to open in 2023.		
Recommendations/Actions Taken/Modifications of BMPs: Fueling area is scheduled to be re-located in 2022 as part of the Facility area modifications.		
b. Maintenance & repair		
i. Washing occurs at off-site or within salt barn (drains to sewer)	**X**	
ii. Maintenance & repairs occur in designated area	**X**	
(a) Area is covered	**X**	
(b) Run-on is diverted away from location	**X**	
(c) Runoff is contained & treated		(see 1. Above)
iii. Spill cleanup materials are nearby	**X**	
iv. Outdoor maintenance & repairs occur only during dry weather	**X**	
v. Vehicles & equipment have been checked for leaks regularly	**X**	
vi. Drip pans are used under leaking vehicles/equipment	**X**	

Recommendations/Actions Taken:		
Outdoor loading/unloading of materials		
Activity and/or BMP Indicate if BMP is working or if action is required. Indicate required actions under "Recommendations/Actions Taken".	**Working**	**Action Required**
a. Employees & contractors are trained in spill prevention & response	**X**	
b. Spill cleanup materials are readily available	**X**	
c. Designated loading/unloading areas are covered	**X**	
d. Movement of materials during wet weather is discouraged	**X**	
e. Run-on is diverted (including downspouts)	**X**	
f. Drip pans are placed beneath hose/pipe connections	**X**	
g. Drip pans are stored in covered location near liquid transfer area	**X**	
h. Major clean-out of outdated materials is conducted once a year. Interior storage is at the Lands & Grounds building (22 W. Alumni.) Exterior storage of stockpiles of clean Lands & Grounds materials is in the area of the Transfer Station and is on a temporary basis until used or removed from the site. Materials generally consists of clean loam and clean leaf compost.	**X**	
i.		
Recommendations/Actions Taken:		
Outdoor storage		
Activity and/or BMP Indicate if BMP is working or if action is required. Indicate required actions under "Recommendations/Actions Taken".	**Working**	**Action Required**
a. Inventory of materials is minimized	**X**	
b. Storage areas are protected from rainfall by roof or other cover (What about new material stockpiles)	**X**	
c. Erosion controls are placed around large stockpiles	**X**	
d. Berms & curbs prevent run-on and runoff	**X**	
e. Containers are in good condition	**X**	
f. Container lids are secured	**X**	
g. Drums are labeled & stored in secure area	**X**	

Recommendations/Actions Taken:		
Building & Grounds Maintenance		
Activity and/or BMP Indicate if BMP is working or if action is required. Indicate required actions under "Recommendations/Actions Taken".	**Working**	**Action Required**
a. Collected vegetation is composted or put in dumpster. Small piles are routinely stored, chipped, and removed on a regular basis.	**X**	
b. Exposed soils are re-vegetated or mulched	**X**	
c. Trash is not left on ground but placed in waste collection containers, taken to the URI transfer station to be managed and then shipped offsite.	**X**	
d. Drop cloths are used under scraping & sandblasting work	**X**	
e. Pressure washer runoff is screened prior to discharge to storm drain (no detergent is used)	**X**	
f. Downspouts discharge onto pervious surface; flow is dispersed	**X**	
g. Gutters are routinely inspected & cleaned annually.	**X**	
h. Litter and debris are routinely picked up	**X**	
Recommendations/Actions Taken:		
Paved Area Maintenance		
Activity and/or BMP Indicate if BMP is working or if action is required. Indicate required actions under "Recommendations/Actions Taken".	**Working**	**Action Required**
a. Area is swept or vacuumed; litter/debris removed	**X**	
b. Sheet runoff flows to vegetated strip or swale	**X**	
Recommendations/Actions Taken:		
Waste Handling & Disposal		
Activity and/or BMP Indicate if BMP is working or if action is required. Indicate required actions under "Recommendations/Actions Taken".	**Working**	**Action Required**
a. Waste fluids are stored in good-condition, labeled containers under cover	**X**	

b. Dumpsters are covered	**X**	
c. Waste containers & dumpsters are out of runoff flow paths	**X**	**1**
d. Spill cleanup materials are properly disposed	**X**	
e. Bulk wastes are confined & covered	**X**	
f. Accumulated sediments are removed	**X**	
g. Drums, barrels and tanks are free of leaks	**X**	
Recommendations/Actions Taken: 1. Evaluate water tightness of dumpsters or alternative locations for dumpsters located proximate to catch basins.		
Runoff Management		
Activity and/or BMP Indicate if BMP is working or if action is required. Indicate required actions under "Recommendations/Actions Taken".	**Working**	**Action Required**
a. Runoff from exposed stockpiles, dumpsters is directed to storage or treatment area.	**X**	
b. Minimal sediment accumulation at outfall	**X**	
c. Outfalls are stabilized	**X**	**1**
d. Inlets are marked to avoid accidental exposure	**X**	
e. Inlets are cleaned on routine basis	**X**	
f. All structural components are routinely inspected	**X**	
Recommendations/Actions Taken: 1. Outfall #3, formerly a piped discharge into White Horn Brook, was redirected to enter a culvert underneath West Alumni Rd. south of Brookside S. Riprap at this location washes out during intense storms. Utilities staff believe that the design is inadequate and recommend a permanent repair.		
Inspection of Stormwater Structures *Inspection parameters should be based on requirements of your site specific SWPPP. Add specifics of operations and maintenance plan for specific structures (e.g.: detention/retention basins, oil/water separators, etc.)*		
Activity and/or BMP Indicate if BMP is working or if action is required. Indicate required actions under "Recommendations/Actions Taken".	**Working**	**Action Required**
Structure 1: **Catch Basins**	**X**	
Structure type: (ie: oil/water separator, detention basin) **Catch Basins**	**X**	

Location: In Facilities Area; See Catch Basin Map		
Required Maintenance Activity: Monitor Catch basins for illicit discharges and debris.	**X**	
Required Maintenance Activity: Inspect catch basins annually, and clean and repair them if needed	**X**	
Required Maintenance Activity:		
Other inspection recommendations:		
***Structure 2:* Swale North of the Sherman Building Parking Lot and west of new salt barn.**		
Structure type: (ie: oil/water separator, detention basin) **Swale**	**X**	
Location: North of Sherman Building and South of Central Receiving		
Required Maintenance Activity: Mow grass and maintain slopes and pitch of swale. Mowing done when needed and routinely through mid-fall.	**X**	
Required Maintenance Activity: Repair and erosion problems when evident.	**X**	
Required Maintenance Activity:		
Other inspection recommendations:		
Structure 3:		
Structure type: (ie: oil/water separator, detention basin) **Swale**	**X**	
Location: **Storm water components at the Transfer Station**		
Required Maintenance Activity: Monitor and repair any erosion issues	**X**	
Other inspection recommendations:		
Record Keeping: Training, maintenance and inspection records should be kept as part of the SWPPP. This portion of the inspection is to insure that records are being maintained appropriately. Keep records for at least 5 years after permit expires (best to keep indefinitely)		
Activity and/or BMP Indicate if BMP is working or if action is required. Indicate required actions under "Recommendations/Actions Taken".	**Have Records**	**Action Required**
a. Quarterly outfall visual monitoring results	**X**	

b. Employee training records	**X**	
c. Records of spills and/or leaks	**X**	
d. Inspection records for BMPs; maintained by Utilities	**X**	
e. Maintenance records for BMPs	**X**	
i. Catch basin cleaning - maintained by Utilities	**X**	
ii. Repairs to Campus BMPs - maintained by Utilities	**X**	
f. Inspection of Discharge Locations:	**X**	
i. BMP outfalls are inspected at least once annually	**X**	
g. Maintenance records for other Stormwater Structures	**X**	
h. *Add in any other records you are required to keep, check your SWPPP*		

Overall Comments and Recommendations: Indicate issues that need to be addressed here including: addition of new BMPs, where these new BMPs will be placed and what you hope they will fix. Also include a summary of the results of the quarterly visual monitoring.

1. Maintenance records of BMP's are included as part of the overall campus BMP inspections. The Facility is making a good effort to prevent spills and/or leaks from entering the stormwater system and White Horn Brook. All liquids and chemicals are stored inside. Formal training of staff was conducted and annual training is provided as part of the hazardous material training. The fueling station is being relocated and the associated underground storage tanks removed and replaced with above-ground storage tanks. The project is expected to be completed in 2023. As new facilities and buildings are added, existing water/sewer infrastructure is upgraded with an emphasis on reducing the quantity and improving the quality of stormwater runoff, reducing pollutant inputs to White Horn Brook. Quarterly visual monitoring did not indicate any concerns at this time.

Required Actions (indicate issues that need to be addressed to obtain/maintain compliance)

Required Action	**Date to be completed**	**Date completed**
Cover all material stockpiles./Material stockpiles removed in its entirety in 2018	2009	2017
Maintain inspection records electronically.	2009	Continuous
Maintain maintenance records electronically.	2009	Continous
Reduce size of loam pile.	2009	2010
Install oil/water separators in catch basins. Catch Basins rebuilt in 2018.	2010	2018

Stabilize area adjacent to the brook and at swale. Area was addressed with swales, outfalls and BMPs as part of the Brookside Residence Hall Project, completed in 2020.	2011	2020
Obtain funding to improve the stabilization of riprap at the brook, which was installed as part of the Brookside Residence Hall Project, which washes out during heavy precipitation	2025	To be proposed for FY 2025
Remove stockpile from 210 Flagg Rd parking lot	2010	2011
Remove stockpile Hillside stockpile from area	2012	2012
Remove stockpiles in area of “Goat Barn”	2013	2017

Annual Stormwater Inspection and Report Certification

This Compliance Evaluation Report has been prepared by qualified personnel who properly gathered and evaluated information submitted for this Report. The information in this Report, to the best of my knowledge, is accurate and complete
