Can you believe it? The end of the semester is here! We want to congratulate all of the graduating seniors and in particular our MakerspaceURI student workers who are moving on. We wish you all the absolute best!

Personal Protective Equipment (PPE)
As part of the group Rapid Solvers, during the last month, MakerspaceURI staff and student workers have focused on manufacturing PPE for first responders. Between 3D printing head bands, laser cutting shields and sewing washable masks, the makerspace has produced over 700 articles of PPE.

Crowd Funding
Rapid Solvers is still working 24/7 to meet the ever growing demand for protection from COVID-19. This volunteer organization urgently needs funding for raw materials and supplies. If you wish to contribute, please visit urifae.org/rapidresponse. Your support will keep our frontline responders safe while they actively work to fight against COVID-19.

New Equipment
Since 3D printing is our most popular resource, MakerspaceURI is excited to announce that we will be adding another (5) 3D printers to our fleet. We just purchased four more Dremel 3D20’s and additional Makerbot Replicator+ and are looking forward to having students try them out during the fall semester.

MakerspaceURI Mailing List
If you would like to stay up-to-date with the latest MakerspaceURI news, workshops and events, please join our mailing list by filling out the form Here.

Postponed Events
Unfortunately all of our remaining workshops for the Spring Semester will have to be postponed until Fall 2020. Please check back at the beginning of the school year to see what we are offering.
