

## 2017 Bacteria Data - Western Coastal waters: Enterococci and fecal coliform

Two groups of bacteria are commonly monitored to indicate the presence of human sewage and associated pathogens, or disease causing organisms - fecal coliforms and enterococci. The Rhode Island Department of Health (RIHealth) uses a single-value enterococci standard for licensed swimming beaches. The Rhode Island Department of Environmental Management (RIDEM) and Connecticut Department of Energy and Environmental Protection (CT DEEP) use a geometric mean approach for contact recreation standards on all other waters (fresh and salt). In addition, as required by the National Shellfish Sanitation Program for shellfish waters and their tributaries and as an indicator of overall water quality, fecal coliform levels are also assessed.

While URIWW's Analytical Laboratories are certified by the State of Rhode Island, Watershed Watch data is intended for screening purposes only. Our data are very valuable for targeting areas of concerns and for tracking potential sources of bacterial contamination. Samples may have been collected over a period of days for each collection period, so may reflect dry versus wet weather or rain event values. Please contact Watershed Watch for specific sample dates.

Any result above the state standard is considered unsafe, and swimmers should refrain from swimming until results return to acceptable levels, or at least for several days after heavy rain.

RI Department of Environmental Management and Connecticut Department of Environmental Protection fecal coliform standards:  
Shellfish Waters - Geometric mean not to exceed 14 fecal coliform per 100 mL.

### Clean Up Sound and Harbors Sites (arranged approximately west to east along the coast)

RI Department of Environmental Management and Connecticut Department of Environmental Protection enterococci standards:  
Geometric mean less than 35 enterococci per 100 mL

RI Department of Health standards for recreational contact (i.e. swimming):  
Single sample values not to exceed: 60 enterococci per 100 mL.

To learn more, see our factsheet on bacteria available on URI Watershed Watch's website  
(see <http://cels.uri.edu/docslink/ww/water-quality-factsheets/Bacteria.pdf>)

For additional information about beach monitoring see the Rhode Island Department of Health (<http://www.health.ri.gov/beaches/>)  
Rhode Island Department of Environmental Management has information on state efforts to restore waters impaired by bacteria and other pollutants (<http://www.dem.ri.gov/programs/water/quality/>). In Connecticut, the Department of Energy and Environmental Protection's "Water" webpages have additional information on regulations and restoration efforts in Connecticut, see [www.ct.gov/dep/cwp/view.asp?a=2719&q=325618&depNav\\_GID=1654](http://www.ct.gov/dep/cwp/view.asp?a=2719&q=325618&depNav_GID=1654).
