STEEP

Sources, Transport, Exposure & Effects of Perfluorinated Compounds
UNIVERSITY OF RHODE ISLAND SUPERFUND RESEARCH PROGRAM

STEEP Center Community Kick-off Meeting

Monday, December 4th
1:30 - 3:00 pm

Please join us for a community event to launch the Sources, Transport, Exposure and Effects of PFASs (STEEP) Superfund Research Center and meet the research team.

Barnstable Town Hall
2nd Floor Hearing Room
367 Main Street, Hyannis, MA

PFASs (per- and polyfluoroalkyl substances) are a class of highly persistent, manmade compounds that are showing up in drinking water across the U.S., including the Hyannis Water System and private wells near Joint Base Cape Cod.

The STEEP Superfund Research Center is a five-year project that will study how PFASs move through the environment, how people can be exposed through drinking water, and how these compounds can affect our health.

Come meet the STEEP team and learn about research that will take place both locally and internationally.
