

21ST CENTURY CLASSROOM

Fall 2020 Classroom AV Offerings

Here's What You'll See This Fall

As we move forward into Fall 2020, URI is expanding our

Computer Based Solution

Our standard classrooms will have computer based solutions to accommodate distance learning:

- Camera
- Touchless Microphone
- Document Camera integration for live white boarding.

Capture Device Solution

Our Auditoriums and more advanced AV spaces will be getting dedicated capture devices to allow the following functionality:

- Source mirroring- whatever you send to the main room display, goes to the capture session.
- Incorporated room microphone.
- Cameras installed in the space.

Developing Resources

We are finalizing these additional resources:

- Webcasting for streaming course content
- Laboratory Solutions

classroom AV offerings to accommodate the increasing distance learning needs of our course offerings. The goal will be to nimbly connect a distant student to course content or make a distant instructor available to a room of students.

Moving Forward Together

This project is looking objectively across all classroom spaces and not limiting the scope of the project to one campus or room classification.

We hope to have preliminary training spaces available by the end of July. Please feel free to reach out with any questions and space concerns.
