I was heavily involved in writing the successful EPSCoR grant that was awarded in the summer of 2010 - a process that began in the summer of 09. I was a part of the core writing team for this grant and worked along side Dr. Brad Moran, the EPSCoR office and the rest of the writing team to produce a strong proposal. The grant will bring roughly \$20M to Rhode Island in support and infrastructure over 5 years.

In the summers of 2011 and 2012 I developed and implemented a genetics course for the RITES program. This effort to train grade 6-12 teachers in scientific advances and provide teaching tools through technology has been assisting Rhode Island teachers for three years. In the two years I have been involved, I have instructed ~125 teachers and provided advice and class visits to several during the school year.
